## ACKNOWLEDGEMENT

The CRFM Secretariat would like to thank all the contributors who made possible this publication. Contributors include:

1. The Directors of Fisheries and Chief Fisheries Officers of the CRFM Member States through whom national data were submitted to the CRFM Secretariat.
2. The staff contacts for data and information for CRFM Member States including:
  - Orlando Salisbury, Data Officer, Department of Fisheries and Marine Resources, Anguilla;
  - Remone Johnson, Fisheries Officer, Department of Fisheries and Marine Resources, Anguilla;
  - Ian Horsford, Senior Fisheries Officer, Fisheries Division, Ministry of Agriculture, Lands, Housing and the Environment, Antigua and Barbuda;
  - Edison Deleveaux, Deputy Director of Fisheries, Department of Marine Resources, Ministry of Agriculture, Marine Resources and Local Government, The Bahamas;
  - Christopher Parker, Fisheries Biologist, Fisheries Division, Ministry of Agriculture, Barbados;
  - Ramon Carcamo, Senior Fisheries Officer, Fisheries Department, Ministry of Forestry, Fisheries and Sustainable Development, Belize;
  - Rigoberto Quintana, Fisheries Officer, Fisheries Department, Ministry of Forestry, Fisheries and Sustainable Development, Belize;
  - Derrick Theophille, Fisheries Liaison Officer, Fisheries Division, Ministry of Agriculture and Fisheries, Dominica;
  - Cherene Bowen, Data Clerk Supervisor, Fisheries Division, Ministry of Agriculture, Lands, Forestry, Fisheries and the Environment, Grenada;
  - Crafton Isaac, Fisheries Biologist, Fisheries Division, Ministry of Agriculture, Lands, Forestry, Fisheries and the Environment, Grenada;
  - Ingrid Peters, Senior Fisheries Officer, Fisheries Department, Ministry of Agriculture, Guyana;
  - Avery Smikle, Director, Aquaculture Branch, Fisheries Division, Ministry of Agriculture, Fisheries, Labour and Social Security, Jamaica;
  - Anginette Murray, Marine Researcher/Analyst, Fisheries Division, Ministry of Agriculture, Fisheries, Labour and Social Security, Jamaica;

- Alwyn Ponteen, Chief Fisheries Officer, Department of Fisheries, Montserrat;
  - Marc Williams, Director of Marine Resources, Department of Marine Resources, Ministry of Agriculture, Trade, Lands, Housing and the Environment, St. Kitts and Nevis;
  - Patricia Medar, Fisheries Assistant, Department of Fisheries, Ministry of Agriculture, Rural Development, Food Production and Fisheries, St. Lucia;
  - Cheryl Jardine-Jackson, Senior Fisheries Assistant, Fisheries Division, Ministry of Agriculture, Rural Transformation, Forestry and Fisheries, St. Vincent and the Grenadines;
  - Mario Yspol, Head of Statistics and Research, Fisheries Department, Ministry of Agriculture, Animal Husbandry and Fisheries, Suriname;
  - Lara Ferreira, Senior Fisheries Officer (Ag.), Fisheries Division, Ministry of Land and Marine Resources, Trinidad and Tobago;
3. The staff responsible for data on trade of fish and fishery products at the Statistical Departments of the CRFM Member States.

The Secretariat also wishes to thank all persons who would have corrected and or formatted the manuscript or provided comments towards the improvement of the document.

## **INTRODUCTION**

The mission of the CRFM is “to promote and facilitate the responsible utilization of the region's fisheries and other aquatic resources for the economic and social benefits of the current and future population of the region” (CARICOM Fisheries Unit, 2002). The members of the CRFM are: Anguilla, Antigua and Barbuda, The Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Haiti, Jamaica, Montserrat, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Suriname, Trinidad and Tobago and the Turks and Caicos Islands.

The fisheries of Member States are important foreign exchange earners and a primary contributor to income, employment, food security and social and economic stability, especially in coastal communities.

CRFM Member States are required to collect, manage and appropriately use scientific data and information to inform the fisheries management planning and decision-making process, and fulfil international reporting requirements. Thus, one of the main activities of the CRFM focuses on the enhancement of fisheries data collection systems in the participating Member States. Activities that have been undertaken to improve data collection systems and capabilities of Member States include: training, provision of computers, development of a fisheries database and technical support.

Although data collection systems have improved over the years, Member States still struggle with data collection issues mainly due to the challenge of limited human and financial resources available for data collection and management activities at the national levels. Notwithstanding the above-mentioned constraint, Member States continue to collect and compile the best available data and information for planning and decision-making. It is in this context that the CRFM Statistics and Information Report has been compiled with the aim of providing, at the regional level, an information source for its Member States and other stakeholders to access the most up to date fisheries statistical information that are available from the CRFM Member States. It is hoped that the publication will provide Member States and stakeholders with a regional picture of the fishing fleet, fish production, number of fishers and employment in the sector and the economic importance of the fishery sector of the CRFM region.

This publication is primarily an update of the *CRFM Statistics and Information Report –2014* (Masters, 2013) with data for 2015 to 2016. In cases where data for 2015 and 2016 were not available at the time of publication, these data will be updated in subsequent publications.

## **METHODOLOGY**

Data were collected from the Fisheries Divisions / Departments, the Statistical Departments and other relevant authorities in the CRFM Member States as well as the national reports of the Member States submitted to the CRFM Secretariat. Where it was not possible to collect data from the primary sources, or where data gaps existed, literature searches were conducted and data and information obtained from sources, such as publications by the FAO, project documents, industry magazines, or statistical publications.

## CHAPTER 1: THE FISHERIES RESOURCES OF THE CRFM REGION

### 1.1 Land area, coastline, continental shelf area and EEZ of CRFM Member States

The Member States of the CRFM are 14 sovereign Small Island Developing States (SIDS) and three British Overseas Territories (BOT) (Table 1). Most Member States have exclusive economic zones (EEZs) many times the land area (Table 2). The combined land area of CRFM Member States is 433,549 km<sup>2</sup> whereas the area of the combined EEZ is 2,046,948 km<sup>2</sup>. Some Member States are still negotiating delimitation issues with neighbouring States.

## 1.2 Categories of fishery resources of the CRFM Member States

The fisheries resources of the CRFM Member States can be found in:

- a) Inland waters<sup>1</sup> and /or freshwater systems<sup>2</sup> (rivers, ponds, lakes, etc.)
- b) Aquaculture<sup>3</sup> systems (systems used for farming aquatic animals)
- c) Marine waters<sup>4</sup> (including the territorial sea, EEZ and high seas)

<sup>1</sup> Inland waters; may be used to refer to lakes, rivers, brooks, streams, ponds, inland canals, dams, and other land-locked (usually freshwater) waters (FAO, 2002-2013).

<sup>2</sup> Freshwater ecosystems include lakes, rivers, ponds, streams, groundwater, springs, cave waters, floodplains, as well as bogs, marshes and swamps, which are traditionally grouped as inland wetlands (UNESCO, 1995 – 2012).

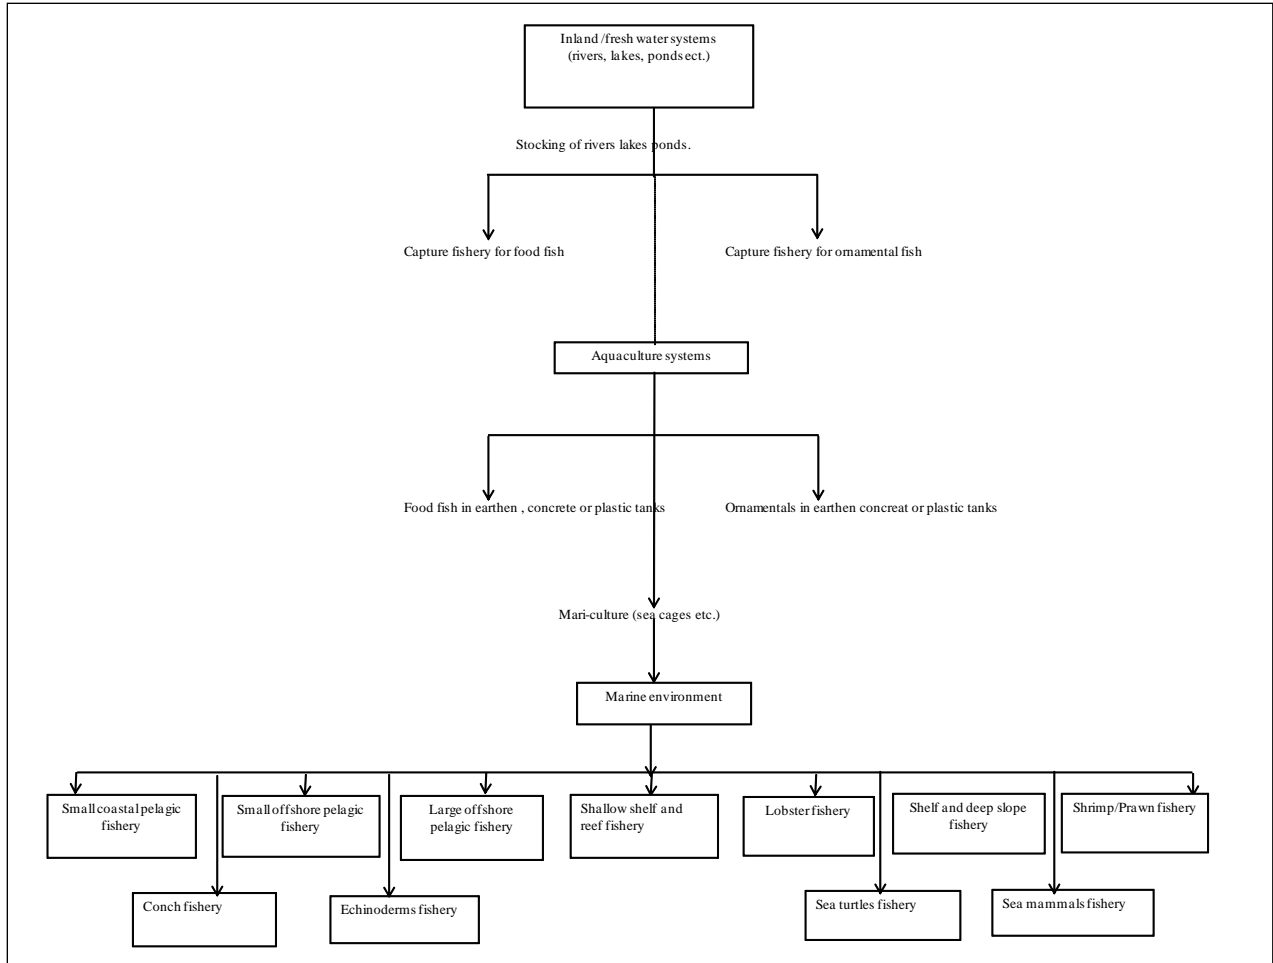

<sup>3</sup> The definition used for aquaculture in this paper is after FAO (2012b) and is understood to mean the farming of aquatic organisms including fish, molluscs, crustaceans and aquatic plants. Farming implies some form of intervention in the rearing process to enhance production, such as regular stocking, feeding, protection from predators, etc. Farming also implies individual or corporate ownership of the stock being cultivated. For statistical purposes, aquatic organisms which are harvested by an individual or corporate body which has owned them throughout their rearing period contribute to aquaculture while aquatic organisms which are exploitable by the public as a common property resource, with or without appropriate licences, are the harvest of fisheries.

<sup>4</sup> Marine waters; refers to oceans and seas including adjacent saltwater areas (FAO, 2002-2013).

All the independent CRFM Member States are SIDS and are characterised by highly integrated ecosystems and sub-ecosystems linked to the marine environment. So too are the overseas territories which are not recognized as SIDS, but share many common features of SIDS. The aquaculture systems depend on the inland and freshwater systems and the marine environment for water supply, and in turn the marine environment is susceptible to changes and activities in the aquaculture, inland and freshwater systems. Figure 1 provides a schematic representation of the linkages and sub-sectors of the fisheries sector of the CRFM Member States.

#### 1.2.1 Fisheries of the inland waters and or freshwater systems of CRFM Member States

Information and data on the fisheries resources of the inland and freshwater systems of the region were limited, as most Member States do not collect data from this sub-sector. There is also a great need for research in this sub-sector. However, the information that was available indicated that the exploitation of the fisheries resources of inland waters or freshwater systems of most of the CRFM Member States was important at the subsistence and/or cultural level. Eleven Member States indicated that the fisheries of the inland waters and fresh water systems (even in cases where the fishery did not produce large economic gains) were of importance to the cultural life of the country and / or played an important role at the subsistence level by providing protein to the local population (Table 3). With regards to economic gain from the fishery, eight Member States: Belize, Dominica, Guyana, Haiti, Jamaica, St. Vincent and the Grenadines, Suriname and Trinidad and Tobago, had important economic activities and earnings from this sub-sector. Haiti and Suriname were the only Member States with an estimate of the amount of fish produced from inland waters and freshwater systems, which stood at approximately 600 mt for Haiti (2009 estimate) and 650 mt for Suriname (2014 estimate).

**Figure 1: Linkages between and sub-sectors of the inland/fresh water systems, aquaculture systems and marine waters of CRFM Member States**

**Table 3: Status, cultural and or subsistence importance, economic importance and latest estimate of catch of the fisheries of inland waters /freshwater systems of CRFM Member States**

Member State	Status of the fisheries of inland waters / freshwater systems	Fisheries of inland waters / freshwater systems are of cultural and / or subsistence importance	Fisheries of inland waters / freshwater systems are of economic importance	Estimate of catch from inland waters / freshwater systems
<b>Anguilla</b>	There are no rivers in Anguilla, and a significant portion of the naturally occurring fresh water is tapped through well systems. Fishing is not occurring in the inland waters / freshwater systems of Anguilla.	No	No	0
<b>Antigua and Barbuda</b>	Traditional harvest of some freshwater and estuarine species at the subsistence level or for recreational purposes occurs in Antigua and Barbuda. The resources harvested include mullets, tarpons and tilapia (FAO, 2007b).	Yes	No	NA
<b>Bahamas</b>	There are no true rivers or streams on the Islands of The Bahamas. Inland water bodies are, in most instances, places where the water table is at or near the same level as the land surface (US Army Corps of Engineers, 2004). Fishing is not occurring in the inland waters / freshwater systems of The Bahamas.	No	No	0
<b>Barbados</b>	The permanent and temporary freshwater catchments of Barbados serve as habitat for species of freshwater shrimps (Simmons & Associates, Inc. 2000), however no known commercial fishing activities occur in these freshwater catchment areas (Fisheries Division Barbados, 2014).	No	No	0
<b>Belize</b>	The inland freshwater fisheries activities are primarily subsistence in nature. The species targeted include: the Baysnook ( <i>Petenia splendida</i> ), the Mayan cichlid locally called crana ( <i>Cichlosomas urophthalmus</i> ) and the tilapia ( <i>Oreochromis niloticus</i> ). The tarpon ( <i>Megalops atlanticus</i> ), two species of catfish ( <i>Ictalurus furcatus</i> and <i>Ictalurus</i> spp.) and the freshwater turtle or hicatee ( <i>Dermatemys mawii</i> ) are also important species in the fishery (Gillett and Myvette, 2008).	Yes	Yes	NA
<b>Dominica</b>	The traditional catching of goby fry (locally called <i>tetiri</i> ) caught at river estuaries, is of some economic importance to some villages in Dominica (particularly the western village of Layou) (FAO, 2004 - 2013a).	Yes	Yes	NA
<b>Grenada</b>	Inland fishery is restricted to harvesting of freshwater crawfish and a half dozen species of finfish within small streams, carried out solely on a subsistence basis. Though contribution from this activity is very minuscule when compared to marine fishery, several rural families depend on this resource for the supply of valuable protein (FAO, 2007a).	Yes	No	NA

<b>Member State</b>	<b>Status of the fisheries of inland waters / freshwater systems</b>	<b>Fisheries of inland waters / freshwater systems are of cultural and / or subsistence importance</b>	<b>Fisheries of inland waters / freshwater systems are of economic importance</b>	<b>Estimate of catch from inland waters / freshwater systems</b>
<b>Guyana</b>	Freshwater fishing is conducted in rivers, creeks, lakes, reservoirs, canals, and in savannah areas. The data available indicate that most inland fishing is carried out by Amerindians. At present, the effort is largely directed at subsistence fishing, although a few fishermen participate in small-scale commercial fisheries (FAO, 2005b).	Yes	Yes	NA
<b>Haiti</b>	Lakes in Haiti are fished extensively. For example, the Lake Azuei, also known as Etang Saumatre, (which is the largest lake in Haiti; 22,000 acres), has ~ 3000 people living around the lake. For about 60% of this population, the sole source of income is fishing (Hargreaves, 2011).	Yes	Yes	600 mt (2009 est.)
<b>Jamaica</b>	Most of the main rivers of Jamaica (there are about 22 main rivers) are fished by the local population. Community watershed ponds and rivers were stocked with <i>Tilapia mossambica</i> (FAO. 2005 - 2014) and a riverine fishery for the species now exists in Jamaica. Fresh water crayfish and shrimp and mullets are also harvested.	Yes	Yes	NA
<b>Montserrat</b>	There is a traditional fishery in the rivers for crayfish and small lobsters. Tilapia are also fished from freshwater ponds (Department of Fisheries Montserrat, 2012*).	Yes	No	NA
<b>St. Kitts and Nevis</b>	Recently in Nevis the ponds and lagoons have become a source for fishing, targeting tilapia and mullets. (Department of Marine Resources, St. Kitts and Nevis, 2012*).	No	No	NA
<b>St. Lucia</b>	There is little information about the freshwater fish species of St. Lucia and therefore research in this regard is needed. Thirteen species of freshwater shrimp have been recorded for St. Lucia and there existed a freshwater shrimp fishery up to 1994 when a moratorium was implemented (Department of Fisheries, St. Lucia. 2012*).	No	No	0
<b>St. Vincent and the Grenadines</b>	The traditional catching of Goby fry (locally called Tri-tri) caught at river mouths and estuaries, is of economic importance to St. Vincent and the Grenadines. (Fisheries Division St. Vincent and the Grenadines, 2012*).	Yes	Yes	NA
<b>Suriname</b>	The inland waters of rivers, estuaries and swamps support a substantial inland waters fishery. The main gears used are driftnets, Chinese seines, seines (locally called river seine) and gillnets (locally called lagoon gillnet) (JICA & IC Net, 2012). In 2014; 650	Yes	Yes	650 mt (2014)

Member State	Status of the fisheries of inland waters / freshwater systems	Fisheries of inland waters / freshwater systems are of cultural and / or subsistence importance	Fisheries of inland waters / freshwater systems are of economic importance	Estimate of catch from inland waters / freshwater systems
	mt of fish were captured from the freshwater systems of Suriname (Department of Fisheries Suriname, 2016*).			
<b>Trinidad and Tobago</b>	Exploitation of fish and decapods occurs in the rivers and streams of Trinidad and Tobago but largely on a subsistence level, except for the tetra fish <i>Hypostomus robinii</i> . The amount taken is not quantified by regulatory agencies. Tetra fishing is for the aquarium trade (Alkins-Koo <i>et al.</i> 2003).	Yes	Yes	NA
<b>Turks and Caicos Islands</b>	No known systematic commercial fishing activity is occurring in the inland/freshwater systems of the Turks and Caicos Islands	No	No	0

NA = Not Available

\* Information obtained directly from the Fisheries Authority of the Member State.

### 1.2.2 Fisheries of the aquaculture systems of CRFM Member States

During 2015 and 2016 most of the CRFM Member States (as was the case in 2013 and 2014), did not produce fish via aquaculture activities. Belize and Jamaica have been the top CRFM producers for a number of years, producing an average 6,662 mt and 767 mt respectively for the period 2013 to 2014. However, in 2015, Haiti produced 2,600 mt of fish from aquaculture which was the second highest production, and in 2016 Haiti's production was 6,400 mt, which was the highest production for that year. Belize produced an estimated 4,753 mt in 2015 but production fell to 1,109 mt in 2016. Aquaculture production in Belize decreased due to an outbreak of Early Mortality Syndrome (EMS) - which is caused by a strain of bacteria called *Vibrio Parahaemolyticus*, that had caused substantial losses in cultured shrimps the previous year (Gov. of Belize, 2017). Guyana, St. Lucia and Trinidad and Tobago continue to make strides towards increased production.

Table 4 and Table 5 provide overviews of the status of aquaculture in CRFM Member States as at 2015 / 2016.

**Table 4: Status of aquaculture in CRFM Member States as at 2015 / 2016**

Member States	Status of aquaculture as at 2015 - 2016	References / Sources
<b>Anguilla</b>	One small aquaponics farm was established during the period (a small freshwater tilapia pool, with 250 fish). The operation is being run on a trial basis. There was no sale from the plants or fish.	Personal communication Gumbs / Masters, 2015
<b>Antigua and Barbuda</b>	During the period the seamoss ( <i>Eucheuma</i> and <i>Gracilaria</i> spp.) and tilapia were cultured in small quantities (mostly in aquaponics - backyard operations of tilapia and vegetables). However, there was one aquaponics establishment (tilapia with lettuce) that was in operating on a relatively larger scale.	Personal communication Simon / Masters, 2015
<b>The Bahamas</b>	Aquaculture fish production was negligible as most of the facilities were still in the start-up phase. As of 2015, there were seven permitted aquaculture establishments and 22 species permitted for aquaculture in The Bahamas. However, production is insignificant with most of the limited aquaculture production at present coming from aquaponics farms, which generate more income from the vegetable production activities than from fish culture.	FAO, 2016
<b>Barbados</b>	Persons have expressed interest in aquaculture and some persons have set up backyard ponds for the culturing of tilapia. However, aquaculture activities are still in the planning stages.	Personal communication Willoughby / Masters, 2014
<b>Belize</b>	Shrimp production figures indicate a substantial drop in white shrimp production in the year 2015 and 2016. This was as a result of the occurrence of a shrimp disease (Early Mortality Syndrome - EMS) which caused production losses.	Sosa, 2017
<b>Dominica</b>	Aquaculture infrastructure was damaged as a result of heavy rainfall and flooding over the period 2011 - 2014. The industry has not yet recovered and aquaculture production during the period 2015 - 2016 was insignificant.	Personal communication Guiste / Masters, 2012 & Norris / Masters, 2015
<b>Grenada</b>	During the period 2015-2016 Grenada continued to focus on increasing the number of seamoss ( <i>Eucheama isiforme</i> and <i>E. cottonii</i> ) aquaculturalists. The seed stock of <i>Eucheama isiforme</i> and <i>E. cottonii</i> were sourced in Venezuela. The backyard ornamental / tilapia facilities have folded, in favour of aquaponics.	Personal communication Isaac / Masters, 2018
<b>Guyana</b>	The 2015 - 2016 aquaculture production of Guyana showed an increase over the 2014 - 2015 production. Tambaqui ( <i>Colossoma macropomun</i> ) had the highest production.	See Table 5
<b>Haiti</b>	Aquaculture production increases from 560 mt in 2013/2014 to 6,400 mt in 2016.	Fisheries Department Haiti, 2017
<b>Jamaica</b>	Aquaculture production in Jamaica continues to be under 1000 mt. Overall aquaculture production stood at 927.4 mt in 2016. In 2010 production stood at 3900 mt. The downturn in production can be attributed to high cost of production and competition from cheaper imported fish, which were exacerbated by the global financial crisis of 2007-2008, as well as change in production practices with several of the large farms changing from intensive culture systems, in which aerators were used, to predominantly semi-intensive and extensive culture systems. This change in production practices is a direct consequence of the high energy cost, the absence of suitable, low-cost feed inputs, poor quality brood stocks, and the inability of the local producers to compete with cheap imported substitutes in both local and export markets. In addition, rather than producing two crops per year, some farmers have resorted to producing a single crop per year based on market demand.	Government of Jamaica, Ministry Paper 50 / 2014.

<b>Member States</b>	<b>Status of aquaculture as at 2015 - 2016</b>	<b>References / Sources</b>
<b>Montserrat</b>	No aquaculture activity took place in Montserrat during the period.	Personal communication Ponteen / Masters, 2016
<b>St. Kitts and Nevis</b>	Two aquaculture projects were in operation; one in St. Kitts and one in Nevis. The projects are operating at the subsistence level, producing tilapia in ponds using seawater.	Personal communication Browne / Masters, 2018
<b>St. Lucia</b>	In 2016 there were 88 fish ponds (32 in 2014) and 55 shrimp ponds (27 in 2014) under production throughout the island, with ponds covering a total of 17.96 hectares of land. In 2016, 84,000 fish fingerling and 980,000 post larval shrimps were produced and the total annual production for aquaculture fish and shrimp in 2016 was 27.2 metric tons. Sea moss ( <i>Gracilaria</i> spp.) production also occurs in the country. In 2015 61 persons were involved in sea-moss production.	Fisheries Division, 2016
<b>St. Vincent and the Grenadines</b>	No aquaculture activity took place in St. Vincent and the Grenadines during the period.	Fisheries Division St. Vincent and the Grenadines, 2017
<b>Suriname</b>	In 2015 there were 82.9 hectares of fish ponds/tanks and 28.8 hectares of shrimp ponds/tanks in Suriname. Production increased from about 80 mt in 2013/2014 to 122.17 mt in 2015.	Fisheries Division Suriname, 2016
<b>Trinidad and Tobago</b>	There were 31 registered producers of food fish plus five hatchery operators in Trinidad and Tobago in 2016. There are also approximately 80 persons, who are not yet at the commercial level and can be regarded as subsistence level producers, were involved in aquaculture. Overall most of the operations can still be regarded as small scale and approximately 200 persons were directly employed in the sector in 2016.	Fisheries Division Trinidad and Tobago 2017
<b>Turks and Caicos Islands</b>	Aquaculture activities ceased with the closure of the Turks and Caicos Islands conch farm, in August 2012.	Personal communication Clerveaux / Masters, 2014

**Table 5: Overview of species produced, total annual aquaculture production (meat weight in mt) and value (US\$) of aquaculture in CRFM Member States for the period 2015 - 2016**

### 1.2.3 Fisheries of the marine waters of CRFM Member States

All CRFM Member States exploit the fisheries resources found in the territorial sea and in the archipelagic waters (of an archipelagic State), as well as parts of the sea that are included in the exclusive economic zone of that State. Belize, St. Kitts and Nevis and St. Vincent and the Grenadines also exploit the high seas via the operation of open registries.

The fishing fleets and fishing gears used to exploit the marine fisheries are mostly artisanal in nature.

The fleet consists of:

1. Traditional fishing vessels: such as canoes - made using the traditional method of *digging out* the trunk of a tree, or planked canoes - which are usually small un-decked boats less than 6 m in length, usually powered by oars and/or sails, however small outboard engines could be used as well.
2. Larger canoes or pirogue type vessels: usually made with glass reinforced plastic (GRP - fibreglass). These could be decked or un-decked and are usually between 6 m to 12 m in length. These vessels are usually powered by outboard engines. However, oars and sails are used as well.
3. Longliners or trawlers; usually greater than 12 m in length, some with steel hulls. Generally they are large covered vessels.

The gears utilized include the Antillean “Z” or “S” traps (commonly called fish pots or fish traps), hand and trolling lines, cast nets, gill nets, hoop nets, spears, spear guns, lobster hook, lobster traps, pelagic longline gear, Chinese seines, and beach seines. Casitas and fish aggregating devices (FADs) are also used in the region. Diving gears (including compressors and SCUBA tanks) are also used in the capture of fish.

The region’s marine fisheries have been grouped according to habitat and the following categories of fisheries have traditionally been acknowledged by the CRFM region: small coastal pelagic fishery, small offshore pelagic fishery, large offshore pelagic fishery, shallow shelf and reef finfish fishery, shallow shelf and reef lobster fishery, shelf and deep slope fishery, shrimp fishery, conch fishery, echinoderms fishery (locally called the sea urchin or sea cucumber fishery), sea turtle fishery and fishery for sea mammals. A brief description of the fisheries categories and the main families or species of interest in the region can be found in Table 6. The number of Member States exploiting each fishery can be seen in Table 7.

The fisheries are exploited by various sectors of the society, and these include the following:

1. Citizens or authorized persons who exploit the fisheries as their primary source of income - commercial exploitation or commercial capture fisheries.
2. Citizens or authorized persons who exploit the fisheries as a recreational activity - recreational exploitation or recreational fisheries.
3. Citizens or authorized persons who exploit the fisheries under sporting activities - sports fisheries.
4. Citizens or authorized persons who exploit the fisheries as a primary source of protein for dependents - subsistence fisheries.

**Table 6: Fishery category and the habitat to which the category is linked, description of the category and some of the main families or species of interest in the CRFM region**

Habitat	Fishery category	Description	Some of the main families or species of interest in the CRFM region
Pelagic waters	Small coastal pelagic fishery	Small fish (generally silvery in appearance) living in the water column directly above continental shelves near the shoreline (coastal waters)	Jacks (Carangidae) Herring (Clupeidae) Silverside (Atherinidae) Anchovy (Engraulidae) Ballyhoo ( <i>Hemiramphus</i> spp.) Scads ( <i>Decapterus</i> spp.) Four winged flyingfish ( <i>Hirundichthys affinis</i> )
	Small offshore pelagic	Medium sized fish (generally tuna and tuna like species) living in the open waters of the oceans (moving between coastal and oceanic waters)	Blackfin tuna ( <i>Thunnus atlanticus</i> ) Cero mackerel ( <i>Scomberomorus regalis</i> ) Dolphinfish ( <i>Coryphaena hippurus</i> ) Wahoo ( <i>Acanthocybium solandri</i> ) Frigate tuna ( <i>Auxis thazard thazard</i> ) Bullet tunas ( <i>Auxis rochei</i> ) King mackerel ( <i>Scomberomorus cavalla</i> ) Little tunny ( <i>Euthynnus alletteratus</i> ) Serra Spanish mackerel ( <i>Scomberomorus brasiliensis</i> )
	Large offshore pelagic	Large, fast-swimming, highly migratory fish species living in the deep open waters of the oceans (oceanic waters)	Albacore ( <i>Thunnus alalunga</i> ) Blue marlin ( <i>Makaira nigricans</i> ) Atlantic bonito ( <i>Sarda sarda</i> ) Atlantic sailfish ( <i>Istiophorus albicans</i> ) White marlin ( <i>Tetrapturus albidus</i> ) Bigeye tuna ( <i>Thunnus obesus</i> ) Black marlin ( <i>Makaira indica</i> ) Longbill spearfish ( <i>Tetrapturus pfluegeri</i> ) Northern bluefin tuna ( <i>Thunnus thynnus thynnus</i> ) Skipjack tuna ( <i>Katsuwonus pelamis</i> ) Swordfish ( <i>Xiphias gladius</i> ) Yellowfin tuna ( <i>Thunnus albacares</i> )
Coral reefs	Shallow shelf and reef finfish fishery	Species living on or over coral reefs or associated with coral reefs	Parrotfishes (Scaridae) Squirrelfishes (Holocentridae) Grunts (Pomadouridae), Surgeonfishes (Acanthuridae), Triggerfish (Balistidae) The Serranidae family (particularly hinds, sea-basses, and small groupers), Snappers (Lutjanidae)
	Shallow shelf and reef lobster fishery	Lobsters are large marine crustaceans with hard exoskeletons. The species targeted in the region generally live in crevices on coral reefs and are specifically targeted or captured as a part of the reef fisheries	Caribbean spiny lobster ( <i>Panulirus argus</i> ) Spotted spiny lobster ( <i>Panulirus guttatus</i> ) Sculptured slipper lobster ( <i>Parribacus antarcticus</i> ) Spanish slipper lobster ( <i>Scyllarides aequinoctialis</i> )
Continental slope (The outer reaches of the continental shelf)	Shelf and deep slope fishery	The main targets of this fishery are deep water snappers and groupers	Silk snapper ( <i>Lutjanus vivanus</i> ) Queen snapper ( <i>Etelis ocellatus</i> ) Jewfish ( <i>Epinephelus itajara</i> ) Red hinds ( <i>Epinephelus guttatus</i> )

<b>Habitat</b>	<b>Fishery category</b>	<b>Description</b>	<b>Some of the main families or species of interest in the CRFM region</b>
to the continental drop-off point			Nassau grouper ( <i>Epinephelus striatus</i> )
Seafloor habitat – soft substrate demersal	Shrimp fishery	Shrimp are stalk-eyed swimming crustaceans with long narrow muscular abdomens (called tails). Most of the commercially valuable shrimps in the region are from the family Penaeidae	Atlantic seabob ( <i>Xiphopenaeus kroyeri</i> ) Southern white shrimp ( <i>Litopenaeus schmitti</i> ) Southern brown shrimp ( <i>Farfantepenaeus subtilis</i> ) Southern pink shrimp ( <i>Farfantepenaeus notialis</i> ) Redspotted shrimp ( <i>Farfantepenaeus brasiliensis</i> )
Seafloor habitat – soft substrate demersal (sand or mud near seagrass beds)	Conch fishery	Fishery specifically for the gastropods from the family Strombidae	Queen conch ( <i>Strombus gigas</i> )
Seafloor habitat – soft substrate demersal. Beds of seagrass ( <i>Thalassia</i> spp.), sand or mangroves, but could also be in the cervices of reefs.	Echinoderms fishery (locally called sea urchin or sea cucumber fishery)	The white sea urchin and the sea cucumber are harvested usually for the export market	White sea urchin ( <i>Tripneustes ventricosus</i> ) Donkey dung sea cucumber ( <i>Holothuria mexicana</i> )
Shallow waters along coast and around islands	Sea turtles	Sea turtles are marine reptiles targeted by net or harpoon	The green turtle ( <i>Chelonia mydas</i> ) The hawksbill turtle ( <i>Eretmochelys imbricata</i> ) The leatherback ( <i>Dennochelys coriacea</i> ) The loggerhead turtle ( <i>Caretta caretta</i> )
Deep oceanic waters	Mammals	Mainly small cetaceans (porpoises, dolphins and pilot whales) There is also aboriginal/traditional capture of humpback whales	Short-finned Pilot Whale ( <i>Globicephala macrorhynchus</i> ) Humpback whale ( <i>Megaptera novaeangliae</i> )

**Table 7: The number of fishery categories exploited by each Member State of the CRFM**

Member States	Small coastal pelagic fishery e.g. jacks, scads, herrings, balao, flyingfish.	Small offshore pelagic fishery e.g. black-fin tuna dolphin-fish, wahoo	Large offshore pelagic fishery – e.g. yellowfin tunas, billfishes	Shallow shelf and reef finfish fishery e.g. grunts, snappers, doctorfish	Shallow shelf and reef lobster fishery	Shelf and deep slope fishery- deep water snappers, groupers, etc.	Shrimp/ prawn fishery	Conch fishery - queen conch	Echinoderms fishery – white sea urchin, sea cucumber	Sea turtles fishery	Mammals - pilot whales, dolphins, porpoises
Anguilla	1	1		1	1	1		1		Moratorium	
Antigua and Barbuda	1	1	1	1 <sup>7</sup>	1 <sup>8</sup>	1 <sup>9</sup>		1 <sup>10</sup>	1 <sup>11</sup>	1 <sup>12</sup>	
Bahamas	1	1	1 <sup>13</sup>	1 <sup>14</sup>	1 <sup>15</sup>	1 <sup>16</sup>		1		Fishery closed <sup>17</sup>	Fishery banned <sup>18</sup>
Barbados	1	1	1	1	1	1		1 <sup>19</sup>	1 <sup>20</sup>	Capture prohibited <sup>21</sup>	

<sup>7</sup> Closed season for parrotfish (*Scaridae*), all species; May 1<sup>st</sup> - July 31<sup>st</sup> annually (Government of Antigua and Barbuda, 2013).

<sup>8</sup> Closed season for spiny lobster (*Panulirus argus*); May 1<sup>st</sup> - June 30<sup>th</sup> annually (Government of Antigua and Barbuda, 2013).

<sup>9</sup> Closed season for Nassau grouper (*Epinephelus striatus*), red hind (*Epinephelus guttatus*) and coney (*Cephalopholis fulvus*); January 1<sup>st</sup> - March 31<sup>st</sup> annually (Government of Antigua and Barbuda, 2013).

<sup>10</sup> Closed season for queen conch (*Strombus gigas*); July 1<sup>st</sup> - August 31<sup>st</sup> annually (Government of Antigua and Barbuda, 2013).

<sup>11</sup> Sea urchin and sea cucumber fisheries are currently subsistent fisheries (Horsford, 2014; I. Horsford (personal communication , 11August 2017))

<sup>12</sup> The Minister may by notice in the Gazette declare an open season for turtle. However no open season was declared (Government of Antigua and Barbuda, 2013; Fisheries Division Antigua and Barbuda, 2015).

<sup>13</sup> Prohibition on possessing, fishing for or landing shark or shark parts; on the sale of shark, shark parts or shark products. (Government of the Bahamas, 2011).

<sup>14</sup> Closed season for stone crab; 1<sup>st</sup> June - 15<sup>th</sup> October (inclusive) annually. Minimum harvestable claw is 4". Harvesting of females is prohibited (Government 2009).

<sup>15</sup> Closed season for crawfish; annual closed season for crawfish extending from 1<sup>st</sup> April - 31<sup>st</sup> July (inclusive). (Government of the Bahamas, 2009).

<sup>16</sup> Closed season [discretionary closure] for the Nassau grouper; December 1<sup>st</sup> - February 28<sup>th</sup> of the following year (Government of the Bahamas, 2009).

<sup>17</sup> Prohibition on taking, possessing, buying or selling of marine turtles, marine turtle parts or marine turtle eggs. (Government of the Bahamas, 2009).

<sup>18</sup> No person shall, within the exclusive fishery zone, fish for, molest or otherwise interfere with any marine mammal (does not apply to a person who has the prior written permission of the Minister to capture marine mammals for scientific, educational or exhibition purposes (Government of the Bahamas, 2009).

<sup>19</sup> A small fishery (Government of Barbados, 2012).

<sup>20</sup> Fishery closed in year 2014. In 2014 stock size would not have been large enough to support opening of the fishery for a reasonable length of time (Government of Barbados, 2015).

<sup>21</sup> Regulation prohibits the capture, possession or sale of marine turtles, turtle eggs and turtle parts (Ministry of Agriculture Barbados, 2012).

Member States	Small coastal pelagic fishery e.g- jacks, scads, herrings, balao, flyingfish.	Small offshore pelagic fishery e.g. black-fin tuna dolphin-fish, wahoo	Large offshore pelagic fishery – e.g. yellowfin tunas, billfishes	Shallow shelf and reef finfish fishery e.g. grunts, snappers, doctorfish	Shallow shelf and reef lobster fishery	Shelf and deep slope fishery- deep water snappers, groupers, etc.	Shrimp/ prawn fishery	Conch fishery - queen conch	Echinoderms fishery – white sea urchin, sea cucumber	Sea turtles fishery	Mammals - pilot whales, dolphins, porpoises
<b>Belize</b>	1	1	1	1 <sup>22</sup>	1 <sup>23</sup>	1 <sup>24</sup>	1 <sup>25</sup>	1 <sup>26</sup>	1	All protected since 2002 <sup>27</sup>	Protection for marine mammals <sup>28</sup>
<b>Dominica</b>	1	1	1	1		1				1 <sup>29</sup>	
<b>Grenada</b>	1	1	1	1	1 <sup>30</sup>	1		1	1 <sup>31</sup>	1 <sup>32</sup>	
<b>Guyana</b>			1			1	1 <sup>33</sup>				
<b>Haiti</b>	1	1	1	1	1	1	1	1	1	NA <sup>34</sup>	NA

<sup>22</sup> Complete ban on all parrotfish, blue tang, surgeon fish; No person shall take in the waters of Belize, or buy, sell or have in possession any grazers, ‘grazers’ means any fish of the Scaridae family, including the genus *Scarus* and *Sparisoma*, any fish of the Acanthuridae family (Government of Belize, 2009a). Tarpon (*Megalops atlanticus*), permit (*Trachinotus falcatus*) and bonefish (*Albula vulpes*) are intended for ‘catch and release’ fishing only (Government of Belize, 2009b).

<sup>23</sup> No person shall take in the waters of Belize or buy, sell or have in his possession crawfish (genus *Panulirus*) - between the 15<sup>th</sup> February and the 14<sup>th</sup> June, inclusive, in any year; (Government of Belize, 2003).

<sup>24</sup> Closed season for Nassau grouper (*Epinephelus striatus*); 1<sup>st</sup> December - 31<sup>st</sup> March inclusive in any year (Government of Belize, 2009a). No whale shark, shall be caught or killed in the waters of Belize (Government of Belize, 2003).

<sup>25</sup> Regulations of 2011 ended the shrimp trawl fishery in Belize; No person shall engage in any form of trawling in the internal waters, territorial sea, exclusive economic zone (Government of Belize, 2011). The shrimp capture fishery is now small scale artisanal. Shrimp season (for wild shrimp) will officially open on July 15<sup>th</sup> of any year inclusive, for a period not exceeding eight months in any one year, but which period may be less than eight months provided that one month’s notice is given in advance (Government of Belize, 2003).

<sup>26</sup> Closed season for conch; 1<sup>st</sup> July - 30<sup>th</sup> September, inclusive, in any year (Government of Belize, 2003).

<sup>27</sup> No person shall fish for in the waters of Belize or buy, sell or have in his possession any hawksbill, loggerhead, leatherback, Kemp’s ridley, olive ridley or green turtle (Government of Belize, 2003).

<sup>28</sup> Hunting of whales (all species), dolphins (all species) and manatee prohibited (Government of Belize, 2000).

<sup>29</sup> Sea turtle closed season; 1<sup>st</sup> June - 30<sup>th</sup> September both dates inclusive (Government of Dominica, 1976).

<sup>30</sup> Lobster closed season; 1<sup>st</sup> May - 31<sup>st</sup> August (ACP Fish II, 2012b).

<sup>31</sup> Grenada sea urchins (sea eggs) fishery is closed - total ban (ACP Fish II, 2012b).

<sup>32</sup> Closed season for turtles; 1<sup>st</sup> May - 31<sup>st</sup> August (ACP Fish II, 2012b).

<sup>33</sup> A closed season was implemented in 2014 for the seabob (shrimp) fishery and the prawn fishery. Closure was 8<sup>th</sup> September - 26<sup>th</sup> October 2014 (6 weeks), both dates inclusive (CRFM website, 2014).

<sup>34</sup> NA=Not Available

Member States	Small coastal pelagic fishery e.g. jacks, scads, herrings, balao, flyingfish.	Small offshore pelagic fishery e.g. black-fin tuna dolphin-fish, wahoo	Large offshore pelagic fishery – e.g. yellowfin tunas, billfishes	Shallow shelf and reef finfish fishery e.g. grunts, snappers, doctorfish	Shallow shelf and reef lobster fishery	Shelf and deep slope fishery-deep water snappers, groupers, etc.	Shrimp/prawn fishery	Conch fishery - queen conch	Echinoderms fishery – white sea urchin, sea cucumber	Sea turtles fishery	Mammals - pilot whales, dolphins, porpoises

Trinidad and Tobago	1	1	1	1	1	1	1	1		Prohibition on killing of any turtle <sup>48</sup>	

<sup>35</sup> There was a closed season for sharks in 2013; 18<sup>th</sup> July - 31<sup>st</sup> December 2013 (JIS, 2013; I. Jones (personal communication, 7 September 2016)).

<sup>36</sup> Lobster closed season; 1<sup>st</sup> April - 30<sup>th</sup> June each year (Government of Jamaica, 1987).

<sup>37</sup> Conch closed season 2013/2014 (declared); 1<sup>st</sup> September 2013 - 28<sup>th</sup> February 2014, (Jamaica Information Service (JIS), 2013).

<sup>38</sup> In 2013 there was a closed season for sea cucumbers; 18<sup>th</sup> July - 30<sup>th</sup> September 2013, as a precautionary measure until a structured management regime could be developed (Kong, 2015; Government of Jamaica, 2015).

<sup>39</sup> Green turtle, hawksbill turtle, loggerhead turtle, Atlantic ridley, Atlantic leatherback all protected (Government of Jamaica, 1945).

<sup>40</sup> Manatee, Pedro seal, bottlenose dolphin, sperm whale, spotted dolphin, Baird's beaked whale, short-finned pilot whale, humpback whale protected (Government of Jamaica, 1945).

<sup>41</sup> The Minister may by notice published in the Gazette declare the period 1<sup>st</sup> May to 31<sup>st</sup> August in any year as a closed season (Government of St. Kitts and Nevis, 1995).

<sup>42</sup> Closed season for sea turtles; 28<sup>th</sup> February - 1<sup>st</sup> October annually (Government of St. Kitts and Nevis, 1995).

<sup>43</sup> Lobster closed season 30<sup>th</sup> April - 1<sup>st</sup> September in each year (Government of St. Lucia, 1985).

<sup>44</sup> Marine turtles closed season; 28<sup>th</sup> February - 1<sup>st</sup> October in each year. Only hawksbill turtles weighing 60lbs or more; green or loggerhead turtle weighing 75lbs or more are permitted to be fished during the open season (Government of St. Lucia, 1985).

<sup>45</sup> Close season for lobster; 1<sup>st</sup> May - 31<sup>st</sup> August annually (Government of St. Vincent and the Grenadines, 1989).

<sup>46</sup> Closed season for turtle; 1<sup>st</sup> March to 31<sup>st</sup> July (Government of St. Vincent and the Grenadines, 1987).

<sup>47</sup> The fishery captures pilot whales and humpback whales. For the seasons 2013 - 2018 the number of humpback whales to be taken shall not exceed 24 (International Whaling Commission, 2016).

<sup>48</sup> Prohibition on killing, harpooning or selling of any turtle (Government of the Republic of Trinidad and Tobago, 2011).

Member States	Small coastal pelagic fishery e.g- jacks, scads, herrings, balao, flyingfish.	Small offshore pelagic fishery e.g. black-fin tuna dolphin-fish, wahoo	Large offshore pelagic fishery – e.g. yellowfin tunas, billfishes	Shallow shelf and reef finfish fishery e.g. grunts, snappers, doctorfish	Shallow shelf and reef lobster fishery	Shelf and deep slope fishery- deep water snappers, groupers, etc.	Shrimp/ prawn fishery	Conch fishery - queen conch	Echinoderms fishery – white sea urchin, sea cucumber	Sea turtles fishery	Mammals - pilot whales, dolphins, porpoises
Turks and Caicos Islands	1	1	1	1 <sup>49</sup>	1 <sup>50</sup>	1		1 <sup>51</sup>		1 <sup>52</sup>	Restrictions relating to marine mammals <sup>53</sup>
<b>Totals</b>	<b>15</b>	<b>16</b>	<b>16</b>	<b>16</b>	<b>13</b>	<b>17</b>	<b>6</b>	<b>13</b>	<b>7</b>	<b>7</b>	<b>1</b>

<sup>49</sup> Restriction relating to parrot fish; No person shall take, have in his possession buy or sell any parrot fish (Government of Turks and Caicos, 2014a)

<sup>50</sup> Closed season in relation to crawfish shall be the period from the first day of April to the thirty-first day of July (inclusive) in each year or such other dates as may, from time to time, be appointed by the Governor in the Gazette (Government of Turks and Caicos Islands, 2014a).

<sup>51</sup> Closed season (on exports) for queen conch; No person shall export queen conch during the period 15<sup>th</sup> July - 15<sup>th</sup> October each year (Government of the Turks and Caicos Islands, 2014a).

<sup>52</sup> Closed season for hawksbill turtles 1<sup>st</sup> August - 31<sup>st</sup> March inclusive each year (Government of the Turks and Caicos Islands, 2014b). No person shall take any turtle on any beach or at any place above low water mark; take any turtle of the species Kemp's ridley turtle or leatherback turtle or olive ridley turtle (Government of the Turks and Caicos Islands, 2014a).

<sup>53</sup> No person shall engage in fishing for, molest or otherwise interfere with any marine mammal (Government of the Turks and Caicos Island, 2014a).

## **CHAPTER 2: THE FISHING FLEET OF THE CRFM REGION**

### **2.1 Fishing vessels operating in CRFM Member States**

Most fishery exploitation activities in the region employ the use of vessels (vessels used in aquaculture facilities were not included as a part of the fishing fleet of the region).

Vessels are used in almost all categories of fish exploitation, including:

- (i) Recreational exploitation - recreational fisheries
- (ii) Sporting exploitation - sports fisheries
- (iii) Subsistence exploitation - subsistence fisheries
- (iv) Commercial exploitation - commercial capture fisheries

Data and information on vessels used exclusively for recreational fishing, sports fishing and subsistence fishing (where these vessels were not registered by the fisheries authority of Member States) were not included in this report at this time<sup>54</sup>. In some cases vessels are used interchangeable between fishery types and categories. The Fisheries Authorities of Member States had available, records of the vessels used in commercial capture fisheries.

### **2.2 Quantity of vessels operating in the commercial capture fisheries of the CRFM region**

Very few Member States conduct annual fishing vessel censuses. Where timely vessel censuses are not carried out, information on destroyed or inactive vessels are usually not available and thus vessels that no longer exist or are no longer operating are often not removed from the vessel registries of the Fisheries Divisions / Departments. The number of registered vessels therefore may not in all cases reflect the exact number of vessels operating in the fishing industry of the Member States. It does serve however as an indicator of the possible number of vessels in operation.

The total number of fishing vessels operating in the commercial capture fisheries of CRFM Member States was estimated at 27,252 in 2014; 32,817 in 2015 and 32,836 in 2016 (average 32,817 per year 2015/2016). The increase of 5565 vessels observed between 2014 and 2015 was mostly as a result of new information reported by Haiti. Prior to 2015 the last available estimate from Haiti was 5,630 vessels in 2008. Updated information received from Haiti, indicated that there were 11,600 in the 2015/2016 period (Table 8). The figures for 2015 and 2016 were similar as in most cases 2015 estimates were used for 2016, as 2016 data were not available.

The number of vessels fishing on the high seas and registered in Member States of the CRFM during 2015 and 2016 was estimated at 105 in 2015 and 98 in 2016 (Table 9). The three Member States with fishing vessels registered on open registers in 2015/2016 were; Belize (31 in 2015) St. Kitts and Nevis (40 in 2015 and 35 in 2016 ) and St. Vincent and the Grenadines (34 in 2015 and 32 in 2015). The region therefore had a total of 105 fishing vessels registered under open registries in 2015, a decrease of 66% from the 2012 estimate of 168.

### 2.3 Types and categories of fishing vessels operating in the commercial capture fisheries of CRFM Member States

Most of the CRFM Member States described their commercial capture fishery fishing fleets as artisanal fleets. Table 10 provides a summary of the types and categories of fishing vessels used in the commercial capture fishery of CRFM Member States, and it indicates that many traditional fishing vessels such as canoes (small dugout and planked canoes) dories and pirogues are still in use in the CRFM region. Table 11 shows that in 2013 / 2014 of 11,709 vessel from the commercial capture fishery fishing fleet examined approximately 61% attained a length of up to 5.9 metres length overall and approximately 26% were between 6 – 11.9 metres length overall. Approximately 14% of the fleet was above 12 metres length overall. Large industrial vessels were seldom in the fleet with only 4% of the fleet between 30 - 35.9 metres length overall.

Table 10: Summary description of the commercial capture fishery fishing fleets of CRFM Member States

CRFM Member States	Summary description of the fishing fleet (length of vessels is length overall - LOA)	Source / Reference
Anguilla	There are four, ~14m trawlers on the island. Besides those, the majority of the boats are primarily wood and fibreglass, open hull vessels, powered by outboard engines, with the exception of the four trawlers which are powered by inboard engines. Their sizes range from 5 – 15m.	CRFM, 2014
Antigua and Barbuda	The fleet has transitioned from wooden sloops and dories, which dominated the fleet in the 1970's, to fibreglass launches and pirogues. Categories of vessels include: 1. Sloops and dories; small wooden boats up to 5.9 metres 2. Launches and pirogues; usually made from fibreglass, length 6.72 metres	Horsford, 2004
Bahamas	Commercial fishing vessels range in size from 3.35 metres to 30.5 metres. In many instances <i>dinghy</i> (small vessels < 6 metres long) work in conjunction with a larger motorized <i>mothership</i> that acts as a base for operations (primarily in the lobster and conch fishery). Categories of vessels include: 1. The <i>dinghy</i> (small vessels < 6 m in length) which forms the majority of the fleet. 2. Small scale fishing vessels 6 – 16 metres in length	CRFM, 2006 CRFM, 2008

CRFM Member States	Summary description of the fishing fleet (length of vessels is length overall - LOA)	Source / Reference
	3. Large motorized vessels “mothership” (up to 30.5 m in length) that acts as a base for operations	
<b>Barbados</b>	The fleet range from small open rowboats (less than 6 metres) to inboard-engine powered longliners (over 22 metres). Categories of vessels include: 1. <i>Moses</i> ; open boats 3 - 6 metres 2. <i>Dayboats/Launches</i> : mostly wooden vessels 6 - 12 metres, fitted with a cabin 3. <i>Iceboats and Longliners</i> : characterized by a fitted insulated ice hold; carry a cabin; usually greater than 12 metres	Government of Barbados, 2004
<b>Belize</b>	Most fishing vessels range between 3.6 metres to 9.14 metres in length and are wooden or fibreglass fishing vessels fitted with outboard engines (15-75 hp) or sail. Vessels are used to exploit both freshwater systems and the marine environment. Categories of vessels include: 1. Outboard powered skiffs and canoes. 2. Round bilged sailing boats	Villanueva, 2009
<b>Dominica</b>	Keel-type vessels account for approximately half of the fishing fleet. Categories of vessels include: 1. Canoes 2. keel-type boats and pirogues	Theophile, 2012
<b>Grenada</b>	Pirogues and small open vessels are the main types of vessels used. The range in boat sizes have increased from 4.9 - 9.1 metres to 4.9 - 16.8 metres in recent years. Categories of vessels include: 1. Small open boats; canoes and small pirogues 2. Open and decked pirogues 3. Longliners	FAO, 2007a; CRFM, 2011b
<b>Guyana</b>	The marine capture fisheries are exploited by: 1. Shrimp trawlers; 21 metres in length. (Gulf of Mexico standard steel-hulled vessels with twin otter trawl nets). 2. Finfish trawlers (these are usually smaller than the shrimp trawlers). 3. The artisanal fishing fleet which consist of wooden flat-bottomed dory type vessels ranging in size from 6 to 18 metres. The inland freshwater fisheries are exploited using small, flat-bottomed, dory type vessels	CRFM, 2008; JICA and IC Net Limited, 2012
<b>Haiti</b>	Vessels are artisanal vessels ranging from 3 - 6 metres Categories of vessels include: 1. Rowboats ( <i>canots à quille</i> ); length 3.3 to 6 metres 2. Flat-bottomed boats ( <i>corallins</i> ); length 3.3 – 5 metres 3. Dugout wooden boats ( <i>pirogues monoxyles</i> ); length 3.3 – 4 metres	JICA and IC Net Limited, 2012
<b>Jamaica</b>	The fishing fleet consist principally of open glass-fibre reinforced plastic, (GFRP) canoes. Categories of vessels include: 1. Dugout wood canoes and other small open canoes 2. Open reinforced fibreglass plastic (FRP) canoes most of which are 8.5 metres, large size wooden boats locally called <i>big head</i> 3. Fish trading vessels locally called <i>packer boats</i> 4. Steel or aluminium hull vessels operating as “mothership” on offshore banks	FAO, 2004-2013b; Kong, 2003
<b>Montserrat</b>	The length of vessels in the fleet range from 3.7 - 9.1 metres The fleet consist of: 1. Traditional wooden boats. 2. Open fibreglass reinforced pirogues (largest category)	CRFM, 2011b
<b>St. Kitts and Nevis</b>	Approximately 80% of the fleet are open pirogues between 5 to 12 metres in length	CRFM, 2006
<b>St. Lucia</b>	Fishing vessels engaged in the fishery in Saint Lucia range between 5 - 9 meters and are propelled mainly by outboard engines. Categories of vessels include: 1. Small wooden canoes and pirogues 2. Open and decked pirogues, transom, and shalooop 3. Longliners and whalers	CRFM, 2009

CRFM Member States	Summary description of the fishing fleet (length of vessels is length overall - LOA)	Source / Reference
<b>St. Vincent and the Grenadines</b>	<p>Most fishing vessels are open and powered by outboard engines. Categories of vessels include:</p> <ol style="list-style-type: none"> <li>1. Flat Transoms locally called <i>bow stern</i> or <i>dories</i> (open boats of 3 - 6 metres in length) and other small canoes and rowboats</li> <li>2. Fibreglas pirogues , ranging from 7 - 10 metres in length</li> <li>3. Double enders or “<i>two bows</i>” ; open wooden boats ranging from 3 - 9 metres in length</li> <li>4. Longliner type multipurpose boats ranging in length from 10.6 - 14.8 metres</li> </ol>	CRFM, 2012b
<b>Suriname</b>	<p>Fishing vessels operate in Suriname’s marine, brackish and inland waters. The marine resources are exploited by:</p> <ol style="list-style-type: none"> <li>1. Shrimp trawling vessels.</li> <li>2. Finfish trawling vessels.</li> <li>3. Longliners.</li> <li>4. Large canoe type vessels with inboard engines</li> </ol> <p>The fish resources of inland waters are exploited by canoe type vessels</p>	FAO, 2008; CRFM, 2008
<b>Trinidad and Tobago</b>	<p>The 2003 fishing vessel census for Trinidad found that about 96% of the vessels were artisanal (including trawlers) about 2% were semi-industrial multi-gear vessels and 1% were semi - industrial longliners. Categories of vessels include:</p> <ol style="list-style-type: none"> <li>1. Pirogues usually 7 - 12 metres in length including artisanal trawlers (though pirogues could be as small as 4 metres)</li> <li>2. Semi industrial longliners, semi-industrial fishpot/line vessels, semi-industrial and industrial trawlers 10 - 24 metres in length</li> </ol>	CRFM, 2008; Fisheries Division Trinidad and Tobago, 2011
<b>Turks and Caicos Islands</b>	<p>The vessels used are artisanal vessels between 5 - 6 metres in length. Categories of vessels include:</p> <ol style="list-style-type: none"> <li>1. small open boats with a 'V' shaped hulls</li> </ol>	CRFM, 2008

## **CHAPTER 3: FISH PRODUCTION OF THE CRFM MEMBER STATES**

Fish harvesting activities occur in the recreational fisheries, sports fisheries, subsistence fisheries, commercial capture fisheries (including the bait fishery) and aquaculture.

Data and information on fish production exclusively from recreational fishing, sports fishing and subsistence fishing in the region were limited, as in most cases data were not collected from these sub-sectors. Fish production statistics from these sub-sectors were not included in this report at this time. During the period the fisheries authorities of the CRFM Member States consistently collected data from the commercial capture fisheries and aquaculture facilities. However, the region's data collection systems tended to be more geared towards the collection of data from marine commercial capture fisheries, and in most cases data and statistics on commercial capture of fish from inland fresh water systems were also limited (see section 1.2.1).

### **3.1 Production of the marine capture fisheries of CRFM Member States**

The overall trend in total marine fish production of the CRFM Member States 2005 to 2016 is one of increasing production. Annual average production for the period 2005 to 2016 was 159,257 mt live weight / 141,742 mt meat weight. Peak production was between the years 2010 to 2013 attaining the highest production of 174,665 mt live weight / 154,309 mt meat weight in 2012. Total production fell in 2014 due to fall in production experienced by Guyana, Suriname, Trinidad and Tobago and Jamaica (four of the highest producing Member States). In 2014 Guyana experienced a 25.48% decrease in production and Jamaica a 21% decrease. Though the production from marine capture fisheries from Guyana also fell in 2015 the overall total production for the region recovered with increased production from Suriname and Jamaica. In 2016 Guyana's production also recovered and so the overall total production for the region has improved over the 2015 to 2016 (Figure 4, Table 12, Table 13).

The drop in Guyana's production (the highest producing Member State in 2013) between 2013 and 2014 was 12,630 mt and between 2013 and 2015 it was 13,741 mt. Guyana suggested the following possible reasons for the decline: (i) the effects of Sargassum seaweed in Guyana's waters; (ii) the weather conditions in the ocean were not favourable with some strong winds and the fishermen complained about a phenomenon they referred to as "slime" in the waters which usually occur during periods of low rainfall; (iii) the high cost of inputs such as fuel caused some fisherfolk to reduce their effort; and (iv) in Berbice the fisherfolk complained that the dredging of the Berbice River mouth caused silting of the fishing grounds and therefore a reduction in catch.

Since 2014 Suriname has been the top producer of marine capture fisheries of the region, producing an average of 41,273 mt of fish annually. However over the longer time period of 2005 – 2016 Guyana's annual production of 43,892 mt live/meat weight annually is higher than that of Suriname (33,778 mt live/meat weight annually) Table 15 and Figure 5.

The production of the high seas fleets of Belize, St. Kitts and Nevis and St. Vincent and the Grenadines produced 123,588 mt of fish in 2015 and 84,216 mt in 2016 (Table 14).

Figure 4. Annual total capture fish production (meat weight in mt) of CRFM States for period 2005 – 2016.

<sup>67</sup> Conversion factor for meat weight/dirty conch to live weight is x 7.5 (FAO, 2012b quoted by Ulman et al, 2016) except for Antigua and Barbuda conversion factor 6.77 (Horsford et al, 2011.)

<sup>68</sup> Notes for Trinidad and Tobago

1. Landings data are collected from the Trinidad Artisanal Fleets, Semi-industrial/Industrial Trawl & Longline Fleets, and Game Fishing Tournaments in Trinidad & Tobago.
2. In the absence of a data collection system for the Trinidad Semi-Industrial Fishpot & Line fleet, an estimate of 970 t for 1997 is used.
3. In the absence of total landings for the Tobago commercial fishery, an estimate of 2,479 t for 1991 (Mohammed 1994) is used. In 1991 there were a total of 275 registered fishing vessels, all of which were artisanal, compared with a 2006 estimate of 306 vessels of which about nine (9) were semi-industrial and the remainder artisanal (based on personal communication with staff of the Department of Marine Resources and Fisheries of the Tobago House of Assembly (THA)).
4. In the absence of a data collection system for the Recreational fleet, a 1993 annual estimate of 1,231 t for the recreational fishery in the Northwest peninsula of Trinidad (Mike, 1993) is used.
5. Recorded landings for the Tobago Artisanal & Semi-industrial Fleets for tuna-like species only (sample data only) for 2005 are included.
6. Landings from foreign fleets that may have operated in Trinidad and Tobago waters are not included.

- 
7. *Note that estimates for 2013 to 2016 are considered preliminary due to (apart from the numbered notes above) the fact that the estimated landings of the Trinidad artisanal multi-gear fleets including trawl, as well as the non-artisanal trawl fleets are not yet available (and hence the 2013 preliminary figures for these fleets have been used for all these years). Note however that for all these years the landings estimated for the pelagics from the Trinidad and Tobago non-artisanal longline fleet and game fishing tournaments have been estimated and submitted to ICCAT and have been incorporated in the table.*

**Table 13: Annual marine capture fish production (meat weight in metric tonnes) of CRFM Member States for the period 2005 – 2016**

<sup>69</sup> Calculations were based on meat weight.

**Figure 5: Average annual marine capture fisheries production (meat weight in mt) of CRFM Member States (in descending order) for period 2005 – 2016.**

Over the last two year period (2015 – 2016), Suriname, Guyana, Haiti, Trinidad and Tobago, Jamaica and the Bahamas (the top six meat weight producers respectively), produced approximately 91.9 % of the average total meat weight of the marine fish production of the CRFM Member States<sup>70</sup>, and over the longer time period of 2005-2016 (11 years) they produced 90%.

Suriname’s average annual contribution to the average total marine capture fish production of the region was approximately 29.7% yearly, that of Guyana approximately 26.38% and that of the other top producers between 5% and 11% and the other CRFM Member States combined, contributed approximately 8% annually (Table 16 and Figure 6).

Table 17 shows marine capture fish production (in mt) of CRFM Member States by fishery and species for 2015.

**Table 16: Average annual production and percentage contributions by CRFM Member States to the total average annual fish production (meat weight in mt) for the periods 2005 – 2016 and 2015 - 2016**

<sup>70</sup> Calculations were based on meat weight values

**Notes:**

**Marine fish nei - includes all marine fish which were not identified.**

<sup>73</sup> nei = not elsewhere included.

<sup>74</sup> 2014 breakdown as 2015 was not available

<sup>75</sup> Production by species for 2013, as information for 2015 was not available

<sup>76</sup> Production by species for 2011, as information for 2015 was not available.

<sup>77</sup> Production by species for 2014, as information for 2015 was not available.

<sup>78</sup> Production by species for St. Kitts only.

<sup>79</sup>The estimate of total landing for 2013 to 2016 are considered preliminary due to (there are other reasons not mentioned here) the fact that the estimated landings of the Trinidad artisanal multi-gear fleets including trawl, as well as the non-artisanal trawl fleets are not yet available (and hence the preliminary 2013 figures for these fleets have been used for all these years). Note however that for all these years the landings estimated for the pelagics from the Trinidad and Tobago non-artisanal longline fleet and game fishing tournaments have been estimated and submitted to ICCAT and have been incorporated in the estimates.

<sup>80</sup> Data on finfish landings were not collected for 2015. The estimate for finfish landings from 2012/13 was used.

### 3.2 Aquaculture fish production of CRFM Member States

During the period 2013 - 2016 the region produced approximately 8,606 mt of fish annually from aquaculture systems. Belize was the largest aquaculture producer over the period, producing approximately 4,796 mt annually followed by Haiti producing approximately 2,530 mt annually (Table 18). Together these two main producers (Belize and Haiti) accounted for 85% of the region's aquaculture output over the period. Table 19 shows total fish (meat weight) production (prod.) in metric tonnes (mt) from marine capture fisheries (MCF) added to the aquaculture production (AC prod) for CRFM Member States for period 2013 - 2016.

*Table 18: Annual aquaculture production<sup>81</sup> (AC prod. in mt) and average annual aquaculture production of CRFM Member States for period 2013– 2016*

## CHAPTER 4: EMPLOYMENT IN THE FISHERIES SECTOR OF CRFM MEMBER STATES

### 4.1 Number of persons employed in direct production in the fisheries sector of the CRFM region

The number of persons employed in direct production in the commercial marine capture fisheries and aquaculture sub-sectors (including full time<sup>82</sup> and part time<sup>83</sup> fishers, harvesters and farmers engaged in, artisanal / subsistence<sup>84</sup> and commercial activities) in the CRFM region in 2015/16, was approximately 124,

842 persons (~118,291 persons employed in direct production in the marine capture fisheries and ~6,551 persons employed in direct production in aquaculture). The 2013/14 estimates were 116,265 persons (~112,558 persons employed in direct production in the marine capture fisheries and ~3,707 persons employed in direct production in aquaculture) (Table 20). Fishers who harvest fish exclusively for recreation<sup>85</sup> and or sport as well as those fishers harvesting exclusively from inland freshwater systems (where these fishers were not registered by the fisheries authority of the Member State), were not accounted for as those data were not available. Member States with inland waters/fresh water systems that are of cultural and /or subsistence, and/or economic importance includes; Antigua and Barbuda, Belize, Dominica, Grenada, Guyana, Haiti, Jamaica, Montserrat, St. Vincent and the Grenadines and Trinidad and Tobago. However most of these Member States did not have available information on the number of persons employed in direct production from the inland waters and or freshwater systems (rivers, ponds, lakes etc.).

The fisheries sector also provides employment for many persons who supply services and goods to the primary producers. This includes persons engaged in processing, preserving, storing, transporting, marketing and distribution or selling fish or fish products, as well as other ancillary activities, such as net and gear making, ice production and supply, vessel construction and maintenance as well as persons involved in research, development and administration linked with the fisheries sector. Most CRFM Member State did not have available the number of person involved in supplying goods and services to the fishing industry. However according to FAO (2010), some estimates indicate that, for each person employed in capture fisheries and aquaculture production, about three jobs are produced in the secondary activities, including post-harvest. When this estimate was applied, the total number of persons employed in the fisheries sector of the CRFM region was estimated at approximately 499,368 in 2015/2016 which was approximately 6.2% of the workforce of the region. However using the more conservative estimates provided by Member States, the total number of persons employed in the fisheries sector of the CRFM region was estimated at approximately 284,739 in 2015/2016 which was approximately 3.5% of the workforce of the region (Table 21).

---

<sup>82</sup> Full-time fishers receive at least 90% of their livelihood from fishing or spend at least 90% of their working time in that occupation (FAO, 2012a).

<sup>83</sup> Part-time fishers receive at least 30% but less than 90% of their livelihood from fishing or spend at least 30% but less than 90% of their working time in that occupation (FAO, 2012a).

<sup>84</sup> Artisanal fisheries are traditional fisheries involving fishing households (as opposed to commercial companies), using relatively small amount of capital and energy, relatively small fishing vessels (if any), making short fishing trips, close to shore, mainly for local consumption. In practice, definition varies between countries, e.g. from gleaning or a one-man canoe in poor developing countries, to more than 20-m. trawlers, seiners, or long-liners in developed ones. Artisanal fisheries can be subsistence or commercial fisheries, providing for local consumption or export. They are sometimes referred to as small-scale fisheries (FAO, 2005a).

<sup>85</sup> Recreational Fishery can be defined as a non-commercial (i.e. not for sale, barter, or trade) subset of capture/harvest fisheries; motivated by catching fish for fun, pleasure, or sport (Gaudin & De Young, 2007)

**Table 20: Number of persons employed in direct production in the marine capture fisheries, aquaculture and other fisheries dependent activities in Member States of the CRFM region in 2013-2014 and 2015-2016**

## CHAPTER 5: ECONOMIC IMPORTANCE OF FISHERIES TO THE CRFM REGION

### 5.1 Fisheries contribution to GDP

Table 22 shows the percentage contribution of the fisheries sector to GDP (in current prices) in CRFM Member States 2010 - 2016. The data indicates that, in 2015/2016 the fisheries sector contributed to the GDP of Member States from a low of 0.051% (Trinidad and Tobago 2015) to a high of 3.8% in Suriname 2015<sup>88</sup>.

### 5.2 Economic contribution to livelihoods

Mahon *et al* (2007), showed that as the fish moved through the various market pathways to the consumer it increases in value and contributes to livelihood, and that the overall additional value was 2.6 times the landed value of the fishery.

During the period 2015 - 2016, at ex-vessel prices (the point of first sale) the value of the marine capture fishery production for the region was estimated at approximately US\$414.2 million annually and the value of the aquaculture fishery was US\$48.3 million annually (Table 23 and Table 24), giving a total value of approximately US\$ 462.5 million annually over the period (Table 25).

During the period 2013 - 2014, at ex-vessel prices (the point of first sale) the value of the marine capture fishery production for the region was estimated at approximately US\$409 million annually and the value of the aquaculture fishery was US\$51 million annually, giving a total value of approximately US\$ 460 million annually over the period.

## CHAPTER 6: TRADE IN FISH AND FISHERY PRODUCTS BY CRFM MEMBER STATES

### 6.1 Imports of fish into the region

In 2015 and 2016 total imports of fish for all CRFM Member States combined (including imports of fish for food, bait and live ornamental fish for breeding or rearing) was approximately 73,922 mt (product weight) annually (73,006 mt in 2015 and 74,837 mt in 2016). Fish imported for food accounted for ~99.8% of the total. The total value of the fish imports for all Member States combined was ~US\$286.6 million in 2015 and ~US\$281.4 million in 2016 (an average of ~US\$284 million annually) Tables 26, 27 and 28.

Source: data collected directly from the Government Statistical Department of the Member State unless otherwise stated.

A comparison of the weight and value of the fish imported in 2015 and 2016 for each country showed that the weight and value of imported fish remained fairly constant over the period (Table 28 and Figure 7). The three largest importers of fish (metric tonnes of fish imported) among the CRFM Member States over the period were Jamaica, Haiti, and Trinidad and Tobago respectively (Table 28 and Figure 7). Jamaica, Haiti (2009 estimate) and Trinidad and Tobago also had the highest values associated with the import of fish for food, bait and ornamentals (Table 29 and Figure 8).

Figure 8: Value (in millions of United States dollars) of fish imported for food, bait and ornamental purposes by CRFM Member States for period 2015 and 2016

In 2015 and 2016 CRFM Member States imported an additional 48% of the production from marine capture fisheries plus aquaculture production of the region that was fit for human consumption. Fish fit for human consumption included the categories chilled fresh or frozen fish, dried salted smoked pickled (cured) fish and canned fish. Imports of chilled/fresh or frozen fish accounted for 41% of the edible fish imported, canned fish accounted for approximately 42% while imports of dried, salted, smoked, pickled (cured) fish accounted for approximately 17% of product weight (Table 30 and Figure 9,10 and 11).

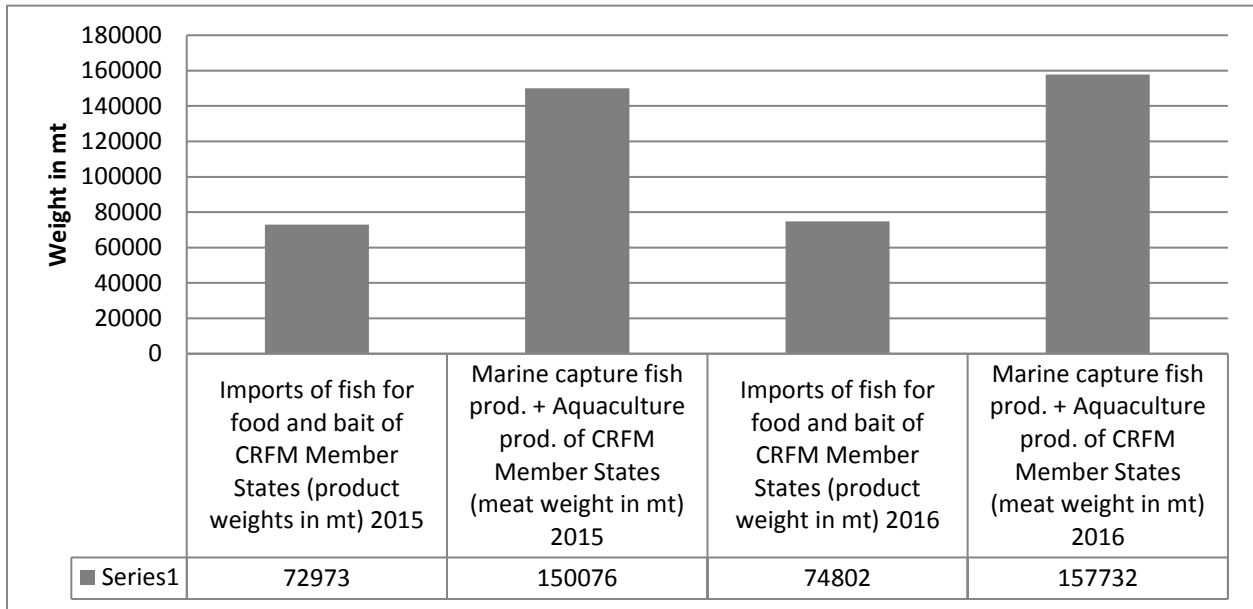

**Table 30: Fish imports (product weight) by categories of chilled, fresh or frozen (mt), dried salted smoked pickled (cured) (mt) and canned (mt), imported by CRFM Member States in 2016**

Anguilla\* - 2010 estimate

Haiti \* - 2009 estimate

NB: Imports weights are product weights.

**Figure 9: Fish imports for food and bait (product weight in mt) versus the total production from marine capture fisheries and aquaculture production (meat weight in mt) of the Member States of the CRFM in 2015 & 2016.**

**Figure 10: Categories of fish products (product weight) by percentage composition, imported into the CRFM region in 2016.**

Figure 11: Fish imports by categories of; chilled fresh or frozen, dried salted smoked pickled (cured) and canned (product weight in mt), imported by CRFM Member States in 2016

Barbados imported (for food) more than 400% (or greater than 4 times the amount) of the meat weight production from the marine capture fisheries and the aquaculture production in 2016. Member States that imported more than 100% of the meat weight production from the marine capture fisheries and the aquaculture production in 2016 included; St. Kitts and Nevis, Turks and Caicos Islands, Jamaica, Montserrat, Dominica and St. Lucia (Table 31 and Figure 12).

Figure 12: Weight of fish imported for food (product weight in metric tonnes) vs the meat weight production from the marine capture fisheries and the aquaculture production of CRFM Member States in 2016.

**6.2 Fish exports from the CRFM region**

In 2015 and 2016 total domestic exports<sup>89</sup> of fish from the CRFM region (including exports of fish for food, bait and live ornamental fish for breeding or rearing) was approximately 65,814 mt annually (69,250 mt in 2015 and 62,377 mt in 2016). Fish exported for food accounted for ~99.9% of the total. The total value of the domestic exports from all Member States combined was US\$263.3 million in 2015 and US\$256.2 million in 2016 (an average of ~US\$259.7 million annually) (Tables 32, 33 and 34).

<sup>89</sup> Exports of goods which were grown, produced, mined, or manufactured in the country from which exported.

**Figure 14: Value of domestic exports of fish for food, bait and ornamental purposes (in millions US dollars) from CRFM Member States for 2013 and 2016**

In 2015 domestic exports of fish for food from the CRFM region was approximately 69,250 mt (46% of the meat weight production from marine capture fisheries plus aquaculture production of the region). In 2016 domestic exports fell slightly to 62,377 mt and this corresponded to 44% of the meat weight production from marine capture fisheries plus aquaculture production of the region (Table 29 and Figure 11). The corresponding figure for 2013 and 2014 were 46% and 44% respectively.

A small portion of the fish imported was re-exported (of 62,349 mt imported by 16 CRFM Member States<sup>90</sup> 1,154 mt (~2%) was re-exported). The three largest domestic exporters of fish (metric tonnes of fish exported) among the CRFM Member States in 2015/2016 were Suriname, Guyana and Belize respectively, together they accounted for 88% of total domestic exports of fish from the region (Table 36 and Figure 15).

**Table 36: Domestic exports of fish for food, total domestic fish exports and re-exports (product weight in mt) 2016 and percentage contribution by Member State to total export of the CRFM region 2016 and 2013-2016**

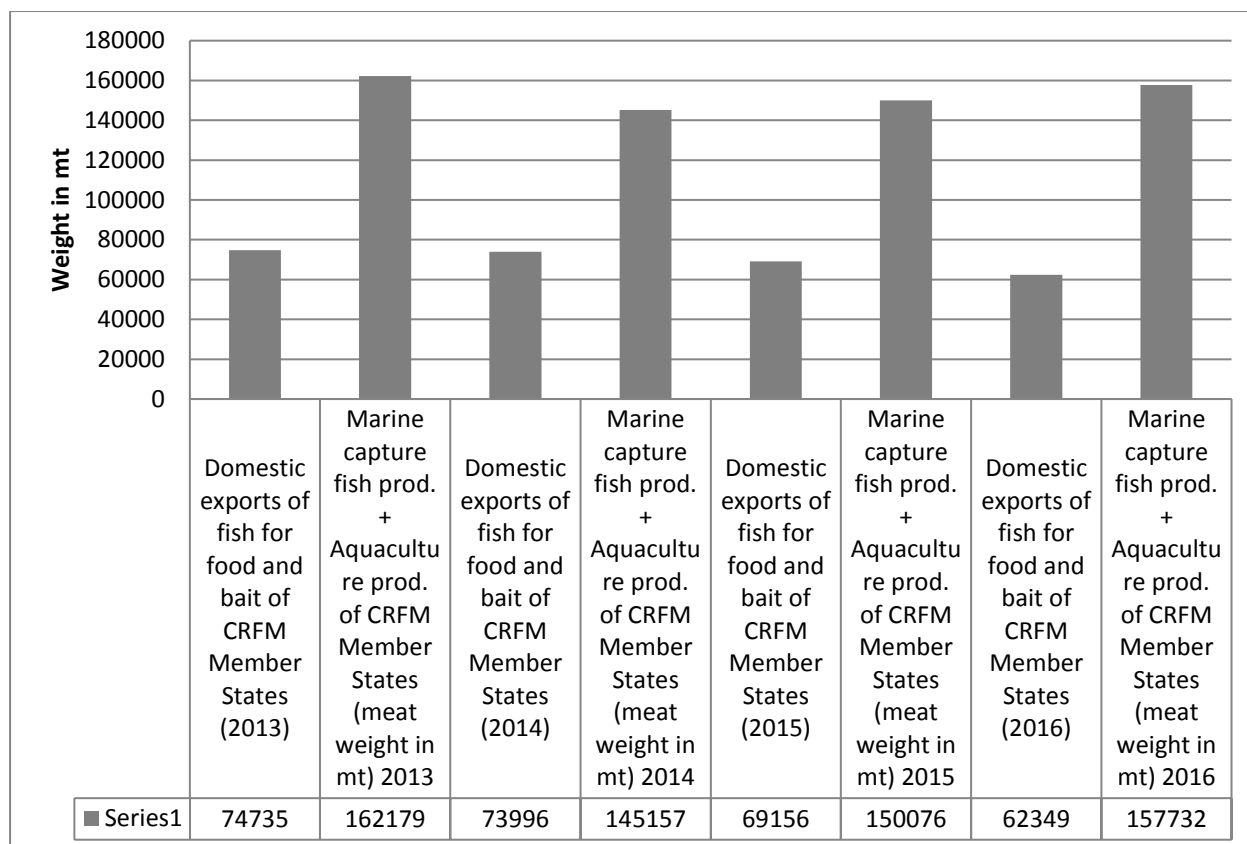

<sup>90</sup> Haiti was assumed to have no re-exports.

**Figure 15: Domestic exports of fish for food and bait (product weight in mt) compared to the total production from marine capture fisheries and aquaculture production (meat weight in mt) of the CRFM Member States 2013 to 2016.**

The species exported for food included: lobsters, shrimp, conch, tunas, snappers, groupers, and various other finfish species and aquatic invertebrates (Table 30). The breakdown of domestic exports from 12 Member States (breakdown was not available for Grenada and Suriname and Anguilla, Haiti and Montserrat had no exports of fish) for 2016, showed that export of shrimp accounted for approximately 34% of the exports from those Member States, valued at US\$56 million. Exports of conch accounted for approximately 8%, exports (value US\$44.5 million), of lobsters 5% (value US\$52 million) and various finfish including tunas, snappers, flyingfish, mackerel, bangamary and groupers accounted for approximately 54% (value US\$63 million) of the export from the 12 Member States analyzed (Table 37 & 37.1 and Table 38).

*NB: the breakdown for Suriname and Grenada were not available*

Suriname exported ~66 % of the fish production from the marine capture fisheries and the aquaculture production in 2016 as food and bait. Belize (62.6%), Guyana (56.3%) and Trinidad and Tobago (36.7%) also exported substantial amounts of the production from the marine capture fisheries and the aquaculture production in 2016 (Table 39 and Figure 16).

**Table 39: Percentage of the production (meat weight) from the marine capture fisheries production (MCF prod.) plus the aquaculture production (AC prod.) that was exported in 2016 by CRFM Member States**

Member States	Domestic exports of fish for food and bait (product weight in mt) 2016	MCF prod. + AC prod. (meat weight in mt) 2016	% of MCF prod. + AC prod. that was exported in 2016
<b>Suriname</b>	27 986	42 319	66.1
<b>Belize</b>	1 665	2 657	62.6
<b>Guyana</b>	23 784	42 278	56.3
<b>Trinidad and Tobago</b>	4 797	13 056	36.7
<b>Bahamas</b>	2 287	9 286	24.6

The CRFM is an inter-governmental organization whose mission is to “Promote and facilitate the responsible utilization of the region’s fisheries and other aquatic resources for the economic and social benefits of the current and future population of the region”. The CRFM consists of three bodies – the Ministerial Council, the Caribbean Fisheries Forum and the CRFM Secretariat. CRFM members are Anguilla, Antigua and Barbuda, The Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Haiti, Jamaica, Montserrat, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Suriname, Trinidad and Tobago and the Turks and Caicos Islands.
