# **DESA**

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

## **Note**

The designations employed in this report and the material presented in it do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Symbols of United Nations documents are composed of capital letters combined with figures.

# WORLD POPULATION PROSPECTS: THE 2012 REVISION

## SUMMARY AND KEY FINDINGS

The *2012 Revision* is the twenty-third round of official United Nations population estimates and projections, prepared by the Population Division of the Department of Economic and Social Affairs of the United Nations Secretariat. The *2012 Revision* builds on the previous revision by incorporating the results of the 2010 round of national population censuses as well as findings from recent specialized demographic surveys that have been carried out around the world. These sources provide both demographic and other information to assess the progress made in achieving the internationally agreed development goals, including the Millennium Development Goals (MDGs). The comprehensive review of past worldwide demographic trends and future prospects presented in the *2012 Revision* provides the population basis for the assessment of those goals.

According to the *2012 Revision* of the official United Nations population estimates and projections, the world population of 7.2 billion in mid-2013 is projected to increase by almost one billion people within the next twelve years, reaching 8.1 billion in 2025, and to further increase to 9.6 billion in 2050 and 10.9 billion by 2100 (figure 1). These results are based on the medium-variant projection, which assumes a decline of fertility for countries where large families are still prevalent as well as a slight increase of fertility in several countries with fewer than two children per woman on average.

**Figure 1. Population of the world, 1950-2100, according to different projections and variants**

Source: Population Division of the Department of Economic and Social Affairs of the United Nations Secretariat (2013). *World Population Prospects: The 2012 Revision*. New York: United Nations.

Small differences in the trajectory of fertility during the next decades will have major consequences for population size, structure, and distribution in the long run. The “high-variant” projection depicted in the figure above, for example, which assumes an extra half of a child per woman (on average) compared to the medium variant, implies a world population of 10.9 billion in 2050 and 16.6 billion in 2100. The “low-variant” projection, where women have half a child less, on average, than under the medium variant, would produce a population of 8.3 billion in 2050. Thus, a constant difference of only half a child above or below the medium variant would result in a global population in 2050 of around 1.3 billion more or less compared to the medium variant of 9.6 billion.

Compared with the results from the previous revision, the projected global population total in this revision is higher, particularly after 2075, for several reasons. First, fertility levels have been adjusted upward in a number of countries on the basis of recently available information. In the new revision, the estimated total fertility rate (TFR) for 2005-2010 has increased in several countries, including by more than 5 per cent in 15 high-fertility countries from sub-Saharan Africa. In some cases, the actual level of fertility appears to have risen in recent years; in other cases, the previous estimate was too low. The cumulative effects of these higher estimates of current fertility levels will play out over several decades and are responsible for significant upward adjustments in the projected population size of certain countries between the two revisions. Second, slight modifications in the projected fertility trajectories of some very populous countries have yielded important differences in long-run forecasts. Third, future levels of life expectancy at birth are slightly higher in several countries within this latest projection; longer survival, like higher fertility, generates larger populations. Lastly, a small portion of the difference between revisions is attributable to changes in the projection methodology used for this revision.

Almost all of the additional 3.7 billion people from now to 2100 will enlarge the population of developing countries, which is projected to rise from 5.9 billion in 2013 to 8.2 billion in 2050 and to 9.6 billion in 2100, and will mainly be distributed among the population aged 15-59 (1.6 billion) and 60 or over (1.99 billion), as the number of children under age 15 in developing countries will hardly increase. Growth is expected to be particularly dramatic in the least developed countries of the world, which are projected to double in size from 898 million inhabitants in 2013 to 1.8 billion in 2050 and to 2.9 billion in 2100.

In contrast, the population of the more developed regions is expected to change minimally, passing from 1.25 billion in 2013 to 1.28 billion in 2100, and would decline were it not for the net increase due to migration from developing to developed countries, which is projected to average about 2.4 million persons annually from 2013 to 2050 and 1 million from 2050 to 2100.

At the country level, much of the overall increase between 2013 and 2050 is projected to take place in high-fertility countries, mainly in Africa, as well as countries with large populations such as India, Indonesia, Pakistan, the Philippines and the United States of America.

The results of the *2012 Revision* incorporate the findings of the most recent national population censuses, including from the 2010 round of censuses, and of numerous specialized population surveys carried out around the world. *The 2012 Revision* provides the demographic data and indicators to assess trends at the global, regional and national levels and to calculate many other key indicators commonly used by the United Nations system.

## **Population in developing countries still young**

Currently the population of the less developed regions is still young, with children under age 15 accounting for 28 per cent of the population and young persons aged 15 to 24 accounting for a further 18 per cent. In fact, the numbers of children and young people in the less developed regions are at an all time high (1.7 billion children and 1.1 billion young people), posing a major challenge for their countries, which are faced with the necessity of providing education and employment to large cohorts of children and youth. The situation in the least developed countries is even more pressing, as children under age 15 constitute 40 per cent of their population and young people account for a further 20 per cent.

In the more developed regions, children and youth account for 16 per cent and 12 per cent of the population, respectively. Whereas the number of children is expected to change little in the future, fluctuating from 206 million in 2013 to around 210 million in 2050 and then to 202 in 2100, the number of young people is projected to decrease from 152 million currently to 142 million in 2050 and then to 138 million in 2100.

In both the more and the less developed regions, the number of people in the main working ages, from 25 to 59 years, is at an all time high: 608 million and 2.6 billion, respectively. Yet, whereas in the more developed regions that number is expected to peak in 2013 and decline thereafter, reaching 533 millions in 2050 and 504 million in 2100, in the less developed regions it will continue rising, reaching 3.7 billion in 2050 and 4.1 billion in 2100. In developing countries, this population is projected to increase by over 400 million within the next decade. These population trends point to the urgency of supporting employment creation in developing countries as part of any strategy to address the slow economic recovery that the world is experiencing.

## **Globally, population aged 60 or over is the fastest growing**

In the more developed regions, the population aged 60 or over is increasing at 1.0 per cent annually before 2050 and 0.11 per cent annually from 2050 to 2100; it is expected to increase by 45 per cent by the middle of the century, rising from 287 million in 2013 to 417 million in 2050 and to 440 million in 2100. In the less developed regions, the population aged 60 or over is currently increasing at the fastest pace ever, 3.7 per cent annually in the period 2010-2015 and is projected to increase by 2.9 per cent annually before 2050 and 0.9 per cent annually from 2050 to 2100; its numbers are expected to rise from 554 million in 2013 to 1.6 billion in 2050 and to 2.5 billion in 2100.

## **Projected trends are contingent on fertility declines in developing countries**

Population ageing results mainly from declining fertility. According to the *2012 Revision*, fertility in the less developed regions as a whole is expected to drop from 2.69 children per woman in 2005-2010 to 2.29 in 2045-2050 and to 1.99 in 2095-2100. The reduction projected for the group of 49 least developed countries is even steeper: from 4.53 children per woman to 2.87 children per woman in 2045-2050 and to 2.11 in 2095-2100. To achieve such reductions, it is essential that access to family planning should expand, particularly in the least developed countries. In 2013, the use of modern contraceptive methods in the least developed countries is estimated at around 31 per cent among women of reproductive age who are married or in union, and a further 23 per cent of such women have an unmet need for family planning. The urgency of realizing the projected reductions of fertility is brought into focus by considering that, if fertility were to remain constant at the levels estimated for 2005-2010, the population of the less developed regions would increase to 9.8 billion in 2050 and to 27.5 billion in 2100 instead of the 8.2 billion and 9.6 billion projected by assuming that fertility declines. That is, without further reductions of fertility, the world population by 2100 could increase by nearly six times as much as currently expected.

## ***Key Findings***

1. In July 2013, the world population will reach 7.2 billion, 648 million more than in 2005 or an average gain of 81 million persons annually. Even assuming that fertility levels will continue to decline, the world population is still expected to reach 9.6 billion in 2050 and 10.9 billion in 2100, according to the medium-variant projection.
2. Future population growth is highly dependent on the path that future fertility will take. In the medium variant, global fertility declines from 2.53 children per woman in 2005-2010 to 2.24 children per woman in 2045-2050 and 1.99 children per woman in 2095-2100. If fertility were to remain, on average, half a child above the levels projected in the medium variant, world population would reach 10.9 billion by 2050 and 16.6 billion by 2100. A fertility path half a child below the medium variant would lead to a population of 8.3 billion by mid-century and 6.8 billion by the end of the century. Consequently, population growth until 2050 is almost inevitable even if the decline of fertility accelerates.
3. In the more developed regions, fertility has increased slightly in recent years, with an estimated level of 1.66 children per woman in 2005-2010. As a result of slightly higher projected fertility and a sustained net in-migration averaging 2.4 million annually from 2013 to 2050, the population of the more developed regions is still expected to increase slightly from 1.25 billion in 2013 to 1.3 billion in 2050 and then to fall back to about 1.28 billion by 2100.
4. The 49 least developed countries (LDCs) as a whole still have the fastest growing population in the world, at 2.3 per cent per year. Although this rate of increase is expected to slow significantly over the next decades, the population of the LDCs is projected to double by mid-century, from 898 million in 2013 to 1.8 billion in 2050, further increasing to 2.9 billion in 2100. Growth in the rest of the developing world is also projected to be robust, though less rapid, with its population rising from 5.0 billion in 2013 to 6.4 billion 2050 and then to 6.6 billion in 2100 according to the medium variant.
5. Slow population growth brought about by reductions in fertility leads to population ageing; that is, it produces populations where the proportion of older persons increases while that of younger persons decreases. In the more developed regions, 23 per cent of the population is already aged 60 years or over and that proportion is projected to reach 32 per cent in 2050 and 34 per cent in 2100. In developed countries as a whole, the number of older persons has already surpassed the number of children (persons under age 15), and by 2050 the number of older persons in developed countries will be nearly twice the number of children; by 2100, that ratio will be closer to 2.2.
6. Population ageing is less advanced in developing countries. Nevertheless, the populations of a majority of them are poised to enter a period of rapid population ageing. In developing countries as a whole, 9 per cent of the population today is aged 60 years or over, but that proportion will more than double by 2050, reaching 19 per cent that year, and triple by 2100, reaching 27 per cent.
7. Globally, the number of persons aged 60 or over is expected to more than triple by 2100, increasing from 841 million in 2013 to 2 billion in 2050 and close to 3 billion in 2100. Furthermore, already 66 per cent of the world's older persons live in the less developed regions and by 2050, 79 per cent will do so. By 2100, this figure will reach 85 per cent.
8. In ageing populations, the number of persons grows faster and faster the higher the age range considered. Thus, whereas the number of persons aged 60 or over is expected to more than triple by 2100, that of persons aged 80 or over is projected to increase almost seven-fold by 2100, increasing

from 120 million in 2013 to 392 million in 2050, and 830 million in 2100. Today, just over half of all persons aged 80 and over live in developing countries, but that share is expected to reach 68 per cent in 2050.

9. Although the population of all countries is expected to age over the foreseeable future, the population will remain relatively young in countries where fertility is still high.
10. High population growth rates prevail in many developing countries, most of which are on the UN's list of 49 least developed countries (LDCs). Between 2013 and 2100, the populations of 35 countries, most of them LDCs, could triple or more. Among them, the populations of Burundi, Malawi, Mali, Niger, Nigeria, Somalia, Uganda, United Republic of Tanzania and Zambia are projected to increase at least five-fold by 2100.
11. In sharp contrast, the populations of 43 countries or areas are expected to decrease between 2013 and 2050; of these, 40 are expected to continue to decrease between 2050 and 2100. Several countries are expected to see their populations decline by more than 15 per cent by 2050, including Belarus, Bulgaria, Croatia, Cuba, Georgia, Latvia, Lithuania, Republic of Moldova, Romania, the Russian Federation, Serbia, and Ukraine.
12. Half of all population growth is concentrated in a small number of countries. During 2013-2100, eight countries are expected to account for over half of the world's projected population increase: Nigeria, India, the United Republic of Tanzania, the Democratic Republic of Congo, Niger, Uganda, Ethiopia and the United States of America, listed according to the size of their contribution to global population growth.
13. Fertility has continued to fall in the vast majority of countries in the less developed regions. Among countries with at least 90,000 inhabitants in 2013, the number of developing countries with high fertility (5 children or more per woman) declined from 58 in 1990-1995 to 31 in 2005-2010, and their share of the world population dropped from 13 per cent to 9 per cent. Over the same period, the number of developing countries with fertility levels below replacement increased from 14 to 32.
14. Most developed countries have had below-replacement fertility (below 2.1 children per woman) for two or three decades. Among the 45 developed countries with at least 90,000 inhabitants in 2013, 41 and 43 had below-replacement fertility in 1990-1995 and 2005-2010, respectively. However, between the 2000-2005 and 2005-2010, 36 developed countries experienced slight increases in fertility. For the more developed regions as a whole, total fertility increased from 1.58 to 1.66 children per woman between those two periods. Yet, in 2005-2010, 26 developed countries, including Japan and most of the countries in Southern and Eastern Europe, still had fertility levels below 1.5 children per woman.
15. In 2005-2010, the 75 countries with below-replacement fertility accounted for 48 per cent of the world's population. The most populous countries with below replacement fertility are China, the United States of America, Brazil, the Russian Federation, Japan, Viet Nam, Germany, the Islamic Republic of Iran and Thailand, in order of population size.
16. Globally, total fertility is expected to fall from 2.53 children per woman in 2005-2010 to 2.24 in 2045-2050 and to 1.99 in 2095-2100 according to the medium variant. However, in the more developed regions, total fertility is projected to increase from 1.66 children per woman currently to 1.85 in 2045-2050 and 1.93 in 2095-2100. A major reduction of fertility is projected for the group of least developed countries (from 4.53 to 2.87 children per woman in 2045-2050 and to 2.11 in 2095-2100) and the fertility of the rest of the developing world is expected to drop from 2.40

children per woman currently to 2.09 in 2045-2050 and 1.93 in 2095-2100, thus converging to the fertility levels expected for the more developed countries by the end of the century.

17. The median age, that is, the age that divides the population in two halves of equal size, is an indicator of population ageing. Globally, the median age is projected to increase from 29 to 36 years between 2013 and 2050 and to 41 years in 2100. The median age is higher in countries or regions that have been experiencing low fertility for a long time. Europe today has the oldest population, with a median age of 41 years in 2013, which is expected to reach 46 years in 2050 and then 47 years in 2100.
18. Countries where fertility remains high and has declined only moderately will experience the slowest population ageing. The median age for the least developed countries as a whole is below 20 years in 2013. It is projected to reach 26 years in 2050 and 36 years in 2100.
19. Increasing longevity also contributes to population ageing. Globally, life expectancy at birth is projected to rise from 69 years in 2005-2010 to 76 years in 2045-2050 and to 82 years in 2095-2100. In the more developed regions, the projected increase is from 77 years in 2005-2010 to 83 years in 2045-2050 and to 89 years in 2095-2100, while in the less developed regions the increase is expected to be from 67 years in 2005-2010 to 75 years by mid-century and 81 years by the end of the century.
20. Life expectancy remains low in the least developed countries, at just 58 years in 2005-2010. Although it is projected to reach 70 years in 2045-2050 and 78 years in 2095-2100, realizing such an increase is contingent on reducing the spread of HIV and combating successfully other infectious diseases as well as non-communicable diseases. Similar challenges must be confronted if the projected increase of life expectancy in the rest of the developing countries, from under 69 years today to 76 years by mid-century and to 82 year by the end of the century, is to be achieved.
21. The under-five mortality, expressed as the probability of dying between birth and the exact age of five, is an important indicator of development and the well-being of children. In 1950-1955, 21 per cent of all children born worldwide did not reach their fifth birthday. By 2005-2010, this rate had fallen to 59 deaths per 1,000 births. However, this rate in least developed regions still remains at a relatively high level, around 112 deaths per 1,000 births in 2005-2010, falling from 172 deaths per 1,000 births in 1990-95.
22. Among the more developed regions, Eastern Europe has the lowest life expectancy and has experienced reductions in life expectancy at birth since the late 1980s. In 2005-2010 life expectancy in the region increased somewhat but at 69.5 years it was almost the same as it had been in 1970-1975 (69.2 years). Despite having recorded some recovery since the late 1990s, Belarus, the Republic of Moldova, the Russian Federation and Ukraine have currently the lowest life expectancies among developed countries (below 70 years).
23. Although the HIV/AIDS epidemic continues to be a major global health concern, adult HIV prevalence reached a peak over the past decade in most countries that are highly affected by the epidemic; a growing number of them are reaching and maintaining lower prevalence levels. Nevertheless, in countries where prevalence has been high, the impact of the epidemic in terms of morbidity, mortality and slower population growth continues to be evident. Thus, in Southern Africa, the region with the highest prevalence of the disease, life expectancy has fallen from 62 years in 1990-1995 to 52 years in 2005-2010 and is only recently beginning to increase. Nevertheless, life expectancy in the region is not expected to recover to the level where it was in the early 1990s until the year 2030.

24. Given the low fertility prevailing in developed countries, deaths are expected to exceed births for the foreseeable future. Consequently, the population of the more developed regions will decrease if the excess of deaths over births is not counterbalanced by a net migration gain. During 2010-2050, the net number of international migrants to more developed regions is projected to be about 96 million, whereas the excess of deaths over births is projected to be 33 million, implying an overall growth of about 63 million.
25. In terms of annual averages, the major net receivers of international migrants during 2010-2050 are projected to be the United States of America (1,000,000 annually), Canada (205,000), the United Kingdom (172,500), Australia (150,000), Italy (131,250), the Russian Federation (127,500), France (106,250) and Spain (102,500). The major countries of net emigration are projected to be Bangladesh (-331,000 annually), China (-300,000), India (-284,000), Mexico (-210,000), Pakistan (-170,000), Indonesia (-140,000) and the Philippines (-92,500). Economic and demographic asymmetries across countries that may persist are likely to remain powerful generators of international migration within the medium-term future.

TABLE S.11. FIFTEEN COUNTRIES OR AREAS WITH THE LARGEST AND FIFTEEN COUNTRIES OR AREAS WITH THE SMALLEST PERCENTAGE CHANGE IN TOTAL FERTILITY BETWEEN 1975-1980 AND 2005-2010, AMONG COUNTRIES WITH TOTAL FERTILITY IN 1975-1980 GREATER THAN OR EQUAL TO 4 CHILDREN PER WOMAN (MEDIUM VARIANT)

Rank	Country or area	<i>Total fertility (average number of children per woman)</i>		<i>Change from 1975-1980 to 2005-2010</i>	
		1975-1980	2005-2010	Difference	Percentage
<i>A. Largest fertility change</i>					
1.	Iran (Islamic Republic of)	6.28	1.89	-4.39	-69.9
2.	Libya	7.94	2.67	-5.27	-66.3
3.	Viet Nam	5.50	1.89	-3.61	-65.7
4.	United Arab Emirates	5.66	1.97	-3.69	-65.2
5.	Maldives	6.85	2.42	-4.44	-64.8
6.	Mongolia	6.65	2.37	-4.28	-64.3
7.	Oman	8.10	2.89	-5.21	-64.3
8.	Tunisia	5.69	2.05	-3.64	-63.9
9.	Qatar	6.11	2.21	-3.90	-63.8
10.	Bangladesh	6.63	2.40	-4.23	-63.8
11.	Lebanon	4.23	1.58	-2.66	-62.8
12.	Algeria	7.18	2.72	-4.45	-62.0
13.	Thailand	3.92	1.49	-2.43	-62.0
14.	Bhutan	6.67	2.55	-4.12	-61.8
15.	Saint Lucia	5.20	2.04	-3.16	-60.8
<i>B. Smallest fertility change</i>					
1.	Chad	6.87	6.85	-0.02	-0.3
2.	Dem. Republic of the Congo	6.46	6.50	0.04	0.6
3.	Niger	7.63	7.58	-0.05	-0.7
4.	French Guiana	3.30	3.27	-0.03	-0.9
5.	Somalia	7.00	7.10	0.10	1.5
6.	New Zealand	2.18	2.14	-0.04	-1.7
7.	Mali	7.01	6.80	-0.21	-2.9
8.	Antigua and Barbuda	2.24	2.17	-0.07	-3.0
9.	Switzerland	1.54	1.47	-0.07	-4.4
10.	Australia	1.99	1.89	-0.10	-5.1
11.	Equatorial Guinea	5.68	5.36	-0.32	-5.6
12.	France	1.86	1.97	0.11	6.0
13.	Canada	1.73	1.63	-0.11	-6.1
14.	Norway	1.81	1.92	0.11	6.3
15.	Belgium	1.70	1.82	0.11	6.6

TABLE S.12. TEN COUNTRIES OR AREAS WITH THE HIGHEST AND THE TEN COUNTRIES OR AREAS WITH THE LOWEST LIFE EXPECTANCY AT BIRTH, 2005-2010, 2045-2050 AND 2095-2100

2005-2010		2045-2050		2095-2100	
Country or area	Life expectancy (years)	Country or area	Life expectancy (years)	Country or area	Life expectancy (years)
<i>A. Highest life expectancy at birth</i>					
1. Japan	82.7	1. China, Hong Kong SAR	89.0	1. Republic of Korea	95.5
2. China, Hong Kong SAR	82.4	2. Republic of Korea	88.4	2. China, Hong Kong SAR	94.9
3. Switzerland	81.8	3. Japan	88.4	3. Japan	94.2
4. Australia	81.7	4. Singapore	87.7	4. Martinique	94.1
5. Italy	81.5	5. Martinique	87.7	5. Singapore	94.0
6. Iceland	81.4	6. Italy	87.3	6. Guadeloupe	93.5
7. Singapore	81.2	7. Switzerland	87.2	7. Italy	93.3
8. Spain	81.2	8. Australia	87.2	8. Australia	93.2
9. Sweden	81.1	9. Guadeloupe	87.1	9. Switzerland	93.0
10. France	80.9	10. Spain	86.8	10. Spain	92.5
<i>B. Lowest life expectancy at birth</i>					
1. Sierra Leone	44.0	1. Sierra Leone	56.1	1. Sierra Leone	69.4
2. Lesotho	45.6	2. Dem. Rep. of the Congo	60.4	2. Guinea	69.6
3. Central African Republic	46.4	3. Guinea-Bissau	62.0	3. Benin	69.6
4. Botswana	46.5	4. Swaziland	62.3	4. Gambia	70.1
5. Zimbabwe	47.3	5. Guinea	63.4	5. Guinea-Bissau	70.5
6. Swaziland	47.4	6. Côte d'Ivoire	64.0	6. Mauritania	70.9
7. Dem. Rep. of the Congo	48.3	7. Benin	64.2	7. Dem. Rep. of the Congo	71.0
8. Mozambique	48.4	8. Gambia	64.5	8. Ghana	71.6
9. Chad	48.7	9. Angola	64.7	9. Papua New Guinea	72.0
10. Côte d'Ivoire	48.7	10. Somalia	65.0	10. Comoros	72.5
WORLD	68.7	WORLD	75.9	WORLD	81.8
